
REFERENCE SPECIFICATIONS

MODEL

Product Name : AC servo driver

Part Number : MINAS-A5NL, A5N9 Series

Issued on
Mar. 6th, 2012

Revised on
Apr. 1st, 2013

Motor Business Division, Appliances Company
Panasonic Corporation

Specification for Each Model	

1. Scope

The specifications are for AC servo driver MINAS-A5NL Series and MINAS-A5N9 Series made by Motor Business Division, Appliances Company, Panasonic Corporation.

<Software version>

This technical reference applies to the servo drivers compatible with software of the following version:

Ver.8.02 or later

For the software version, confirm it by the setup support software PANATERM or other function.

MHDHTC3B4NL1	MHDHTC3B4N91	H	3-phase AC 200–230 V	12kHz	66.1	167.2	
MHDHTB4A2NL1	MHDHTB4A2N91		3-phase AC 380–480 V		33.1	83.7	

(Note 1) MINAS-A5N9 Series are the models which are added the safety function to MINAS-A5NL series.

(Note 2) For the applicable motor and feedback scale, also refer to the technical document SX-DSV02309.

(Note 3) For the serial communication type of the rotary type, contact us.

(Note 4) When you change the carrier frequency, confirm the temperature of the servo driver and the motor.

4. Specifications

4-1 Basic Specifications

Item				Description	
Input power supply	100 V	Main circuit power		Single phase 100–120 V ac	+ 10% - 15% 50/60 Hz
		Control circuit power		Single phase 100–120 V ac	+ 10% - 15% 50/60 Hz
	200 V	Main circuit power	A–D	Single/3 phase 200–240 V ac	+ 10% - 15% 50/60 Hz
			E–H	3 phase 200–230 V ac	+ 10% - 15% 50/60 Hz
		Control circuit power	A–D	Single phase 200–240 V ac	+ 10% - 15% 50/60 Hz
			E–H	Single phase 200–230 V ac	+ 10% - 15% 50/60 Hz
	400 V	Main circuit power	D-H	3 phase 380–480 V ac	+ 10% - 15% 50/60 Hz
		Control circuit power		24 V dc +/- 15%	
	Insulation voltage				Resistant to 1,500 V AC between primary power supply and ground for a minute (Sensed current: 20 mA) * Excluding control circuit power supply part (24 V dc) of 400 V models.
Operation conditions		Temperature		Operation temperature: 0–55 degrees C Storage temperature: -20–65 degrees C	
		Humidity		Operation and storage humidity 90%RH or less (no condensation)	
		Height above the sea		Height above the sea level: 1,000 meters or less	
		Vibration		5. 88 m/s ² or less, 10–60 Hz (Continuous operation at resonance point is not allowed)	

4-2 Compatible Standard (Under Contemplation)

Item		Description
EC Directive	EMC directive	EN55011 (CISPR11), EN61000-6-2, EN61800-3
	Low voltage directive	EN61800-5-1
	Machinery Directives	EN954-1(Cat.3) ISO13849-1 (PL c,d*1)(Cat.3)
	Functional Safety	EN61508(SIL 2) EN62061(SIL 2)
	(For A5N9 Series only)	EN61800-5-2(STO) IEC61326-3-1
UL		UL508C
CSA		CSA22. 2 No.14
KC		KN11 , KN61000-4-2,34,5,6,8,11

*1 The condition of PL d is using EDM.

Size C 100 V/200 V

Option
Rack-mountable
(front mounting)

2-M4 useful thread 5.2
(an opposite side is the same)

Standard
Base mounting type
(rear mounting)

[Front mounting bracket Optional part number]

	Part number
For frame C	DV0PM20029

Size D 200 V

Size D 400 V

[Front mounting bracket Optional part number]

	Part number
For frame D	DV0PM20030

Size E 200 V**Size E 400 V**

Note: For base mounting type (rear mounting type), attach the mounting bracket to the rear surface. Although the above figure shows brackets attached to both the front and rear surfaces, the unit is shipped out with the bracket attached to only the front.

Size F 200 V/400 V

Note: For base mounting type (rear mounting type), attach the mounting bracket to the rear surface. Although the above figure shows brackets attached to both the front and rear surfaces, the unit is shipped out with the bracket attached to only the front.

Size G 200 V/400 V

Standard
Rack-mountable
(front mounting)

Replace the brackets
Base-mountable
(rear mounting)

Note: For base mounting type (rear mounting type), attach the mounting bracket to the rear surface. Although the above figure shows brackets attached to both the front and rear surfaces, the unit is shipped out with the bracket attached to only the front.

Size H 200 V/400 V

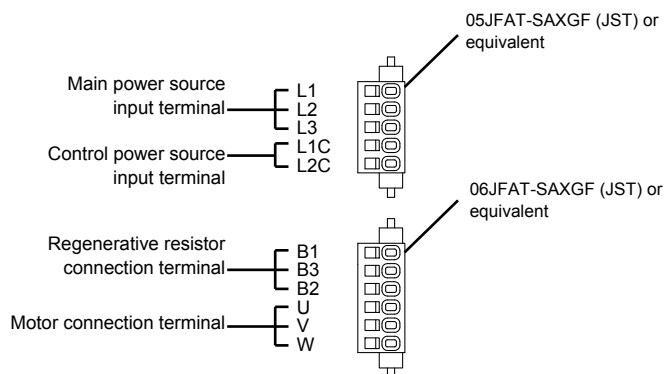

Base mounting type
(rear mounting)

7. Configuration of Connectors and Terminal Blocks

7-1 Power Connector **XA**, **XB**, **XC**, **XD** and Terminal Block

[1] Sizes A, B, C, D of 100 V and 200 V System

	Name	Terminal symbol	Connector pin no.	Description	
XA	Main power supply input	L1	5	100 V	Single phase 100–120 V $\begin{matrix} + 10\% \\ - 15\% \end{matrix}$ 50/60 Hz input Use L1 and L3 terminal.
		L2	4	200 V	Single or 3 phase 200–240 V $\begin{matrix} + 10\% \\ - 15\% \end{matrix}$ 50/60 Hz input Use L1 and L3 terminal for single phase input
		L3	3		
	Control power supply input	L1C	2	100 V	Single phase 100–120 V $\begin{matrix} + 10\% \\ - 15\% \end{matrix}$ 50/60 Hz input
		L2C	1	200 V	Single phase 200–240 V $\begin{matrix} + 10\% \\ - 15\% \end{matrix}$ 50/60 Hz input
XB	Regen resistor connection	B1	6	<ul style="list-style-type: none"> Normally, open the circuit between B2 and B3. (Sizes A, B) Normally, short out the circuit between B2 and B3. (Sizes C, D) When a trip happens due to a regenerative load protection error, connect an external regenerative resistor (prepared by customer) between B1 and B2. 	
		B3	5		
		B2	4		
	Motor connection	U	3	Connect each phase of the motor winding. U: U phase V: V phase W: W phase	
		V	2		
		W	1		
	Earth		—	There are 2 grounding terminals. Connect the one terminal to ground, and the other to the E terminal of a motor. Do not connect more than one wire to a grounding terminal.	

- Refer to section 9-3 for the tightening torque of the screw.

[2] Size E of 200 V System

	Name	Terminal symbol	Connector pin no.	Description		
XA	Main power supply input	L1	5	200 V	3 phase 200–230 V	+ 10% - 15% 50/60 Hz input
		L2	4			
		L3	3			
	Control power supply input	L1C	2	200 V	Single phase 200–230 V	+ 10% - 15% 50/60 Hz input
		L2C	1			
XC	Regen resistor connection	B1	4	Normally, short out the circuit between B2 and B3.		
		B3	3	When a trip happens due to a regenerative load protection error, connect an external regenerative resistor (prepared by customer) between B1 and B2.		
		B2	2	Note: Keep NC terminal unconnected.		
		NC	1			
XB	Motor connection	U	3	Connect each phase of the motor winding.		
		V	2	U: U phase V: V phase W: W phase		
		W	1			
	Earth		—	There are 2 grounding terminals. Connect the one terminal to ground, and the other to the E terminal of a motor. Do not connect more than one wire to a grounding terminal.		

- Refer to section 9-3 for the tightening torque of the screw.

[3] Size D and E of 400 V System

	Name	Terminal symbol	Connector pin no.	Description
XA	Main power supply input	L1	3	3 phase 380–480 V $\pm 10\%$ 50/60 Hz input - 15%
		L2	2	
		L3	1	
XD	Control power supply input	24V	1	24 V dc $\pm 15\%$
		0V	2	
XC	Regen resistor connection	B1	4	Normally, short out the circuit between B2 and B3. When a trip happens due to a regenerative load protection error, connect an external regenerative resistor (prepared by customer) between B1 and B2. Note: Keep NC terminal unconnected.
		B3	3	
		B2	2	
		NC	1	
XB	Motor connection	U	3	Connect each phase of the motor winding. U: U phase V: V phase W: W phase
		V	2	
		W	1	
	Earth		—	There are 2 grounding terminals. Connect the one terminal to ground, and the other to the E terminal of a motor. Do not connect more than one wire to a grounding terminal.

- Refer to section 9-3 for the tightening torque of the screw.

[4] Size F of 200 V System

	Name	Terminal symbol	Terminal no. (upper to bottom)	Description
Terminal block	Main power supply input	L1	1	3 phase 200–230 V $\pm 10\%$ 50/60 Hz input - 15%
		L2	2	
		L3	3	
	Control power supply input	L1C	4	Single phase 200–230 V $\pm 10\%$ 50/60 Hz input - 15%
		L2C	5	
	Regen resistor connection	B1	6	Normally, short out the circuit between B2 and B3. When a trip happens due to a regenerative load protection error, open the circuit between B2 and B3 and connect an external regenerative resistor (prepared by customer) between B1 and B2. Note: Keep NC terminal unconnected.
		B3	7	
		B2	8	
		NC	9	
	Motor connection	U	10	Connect each phase of the motor winding. U: U phase V: V phase W: W phase
		V	11	
		W	12	
	Earth		—	There are 2 grounding terminals. Connect the one terminal to ground, and the other to the E terminal of a motor. Do not connect more than one wire to a grounding terminal.

- Refer to section 9-3 for the tightening torque of the screw.
- Tighten the fixing screw of the terminal block cover with a torque 0.2 N•m or lower.

[5] Size F of 400 V System

	Name	Terminal symbol	Terminal no. (upper to bottom)	Description
Terminal block	Control power supply input	24V	1	24 V dc +/- 15%
		0V	2	
Terminal block	Main power supply input	L1	1	3 phase 380–480 V $\begin{matrix} + 10\% \\ - 15\% \end{matrix}$ 50/60 Hz input
		L2	2	
		L3	3	
	Regen resistor connection	B1	4	Normally, short out the circuit between B2 and B3. When a trip happens due to a regenerative load protection error, open the circuit between B2 and B3 and connect an external regenerative resistor (prepared by customer) between B1 and B2. Note: Keep NC terminal unconnected.
		B3	5	
		B2	6	
		NC	7	
	Motor connection	U	8	Connect each phase of the motor winding. U: U phase V: V phase W: W phase
		V	9	
		W	10	
	Earth		—	There are 2 grounding terminals. Connect the one terminal to ground, and the other to the E terminal of a motor. Do not connect more than one wire to a grounding terminal.

- Refer to section 9-3 for the tightening torque of the screw.
- Tighten the fixing screw of the terminal block cover with a torque 0.2 N•m or lower.

[6] Size G of 200 V and 400 V System

	Name	Terminal symbol		Terminal no. (upper to bottom)	Description
		200 V	400 V		
Terminal block (left side)	Main power supply input	L1	L1	1	200 V : 3 phase 200–230 V $\begin{matrix} + 10\% \\ - 15\% \end{matrix}$ 50/60 Hz input
		L2	L2	2	
		L3	L3	3	
	Regen resistor connection	B1	B1	4	400 V : 3 phase 380–480 V $\begin{matrix} + 10\% \\ - 15\% \end{matrix}$ 50/60 Hz input
		B2	B2	5	
		NC	NC	6	
	Motor connection	U	U	7	• When tripped by a regenerative load protect error, connect an external regenerative resistor (the value set by parameter Pr0.16 and prepared by the user) across B1 and B2. Note: Keep NC terminal unconnected.
		V	V	8	
		W	W	9	
Terminal block (right side)		NC	NC	1	• Leave this terminal unconnected.
	Control power supply input	L1C	24V	2	200 V : Single phase 200–230 V $\begin{matrix} + 10\% \\ - 15\% \end{matrix}$ 50/60 Hz input
		L2C	0V	3	
		NC	NC	4	400 V : 24 V dc +/- 15%
		NC	NC	5	
	Dynamic brake resistor control terminal	DB1	DB1	6	• Connect when it is necessary to control the MC for external dynamic brake resistor (prepared by the user). • Impress the voltage AC300V or less or DC100V or less between DB1 and DB2.
		DB2	DB2	7	
		NC	NC	8	• Leave this terminal unconnected.
		NC	NC	9	
	Dynamic brake resistor control terminal	DB3	DB3	10	• Be short-circuited usually between DB3 and DB4. Remove the short bar when you use the external dynamic brake resistor.
		DB4	DB4	11	
		NC	NC	12	
	Earth			—	There are 2 grounding terminals. Connect the one terminal to ground, and the other to the E terminal of a motor. Do not connect more than one wire to a grounding terminal.

- Refer to section 9-3 for the tightening torque of the screw.
- Tighten M3 terminal block cover fixing screw with the 0.2 N•m torque.

[7] Size H of 200 V and 400 V System

	Name	Terminal symbol		Terminal no. (left to right)	Description
		200 V	400 V		
Terminal block (upper side)	Control power supply input	L1C	24V	1	200 V : Single phase 200–230 V + 10% - 15% 50/60 Hz input
		L2C	0V	2	400 V : 24 V dc +/- 15%
	Dynamic brake resistor control terminal	DB1	DB1	3	<ul style="list-style-type: none"> • Connect when it is necessary to control the MC for external dynamic brake resistor (prepared by the user). • Impress the voltage AC300V or less or DC100V or less between DB1 and DB2.
		DB2	DB2	4	
Terminal block (lower side)	Main power supply input	L1	L1	1	200 V : 3 phase 200–230 V + 10% - 15% 50/60 Hz input
		L2	L2	2	
		L3	L3	3	400 V : 3 phase 380–480 V + 10% - 15% 50/60 Hz input
	Regen resistor connection	B1	B1	4	<ul style="list-style-type: none"> • When tripped by a regenerative load protect error, connect an external regenerative resistor (the value set by parameter Pr0.16 and prepared by the user) across B1 and B2. Note) Do not connect any wire to the NC terminal.
		B2	B2	5	
		NC	NC	6	
	Motor connection	U	U	7	Connect each phase of the motor winding. U: U phase V: V phase W: W phase
		V	V	8	
		W	W	9	
	Earth			—	There are 2 grounding terminals. Connect the one terminal to ground, and the other to the E terminal of a motor. Do not connect more than one wire to a grounding terminal.

- Refer to section 9-3 for the tightening torque of the screw.
- Tighten M5 terminal block cover fixing screw with the 0.4 N•m torque.

7-2 USB Connector X1

By connecting to the PC through USB interface, various operations such as setting/changing of parameters, monitoring of control state, referencing of error/history, and saving/loading of parameters can be performed.

Name	Symbol	Connector pin no.	Description
USB signal	VBUS	1	• Communicate with a computer
	D-	2	
	D+	3	
For manufacturer use	—	4	• Do not connect
Signal ground	GND	5	• Signal ground

7-3 RTEX connectors **X2A** and **X2B**

For connection, use RJ45 connector.

X2A RX connector

Name	Symbol	Connector pin no.	Description
Unused	-	1	Connect to pin 1 on TX connector of sending side node.
Unused	-	2	Connect to pin 2 on TX connector of sending side node.
Network input +	RX+	3	Connect to pin 3 on TX connector of sending side node.
Unused	-	4	Connect to pin 4 on TX connector of sending side node.
Unused	-	5	Connect to pin 5 on TX connector of sending side node.
Network input -	RX-	6	Connect to pin 6 on TX connector of sending side node.
Unused	-	7	Connect to pin 7 on TX connector of sending side node.
Unused	-	8	Connect to pin 8 on TX connector of sending side node.
Frame ground	FG	Shell	Connect to shield of cable.

X2B TX connector

Name	Symbol	Connector pin no.	Description
Unused	-	1	Connect to pin 1 on RX connector of receiving side node.
Unused	-	2	Connect to pin 2 on RX connector of receiving side node.
Network output +	TX+	3	Connect to pin 3 on RX connector of receiving side node.
Unused	-	4	Connect to pin 4 on RX connector of receiving side node.
Unused	-	5	Connect to pin 5 on RX connector of receiving side node.
Network output -	TX-	6	Connect to pin 6 on RX connector of receiving side node.
Unused	-	7	Connect to pin 7 on RX connector of receiving side node.
Unused	-	8	Connect to pin 8 on RX connector of receiving side node.
Frame ground	FG	Shell	Connect to shield of cable.

- Be sure to use shielded twisted pair (STP) compatible with 5e of TIA/EIA-568 or higher category.

7-4 Safety function connector **X3** (for MINAS-A5N9 Series)

For the safety function connector.

Name	Symbol	Connector pin no.	Description	I/O type
Reserved	—	1	Do not connect.	—
	—	2		—
Safety input 1	SF1-	3	These are two independent circuits that turn off the operation signal to the power module to shut off the motor current.	i-1
	SF1+	4		
Safety input 2	SF2-	5		
	SF2+	6		
EDM output	EDM-	7	This is an output for monitoring the failure of the safety function.	o-1
	EDM+	8		
Frame ground	FG	Shell	Connected with protective earth terminal in the servo driver.	—

Refer to the technical document SX-DSV02199 for the safety function.

7-5 I/O Connector **X4****Input signal**

Name	Symbol	Connector pin no.	Description	I/O type
Control signal power source	I-COM	6	<ul style="list-style-type: none"> Connect to positive/negative polarity of the external power supply. Use power supply: 12 V +/-5% to 24 V +/-5% 	—
Input 1	SI1	5	<ul style="list-style-type: none"> Assign functions using parameters. For details, refer to the technical data – Basic function specification – SX-DSV02202. Range of available functions is limited. For example, external latch input EXT1 can be allocated only to SI5, EXT2 to SI6 and EXT3 to SI7. For factory default function assignment, refer to appendix “Specification for Each Model”. 	i-1
Input 2	SI2	7		i-1
Input 3	SI3	8		i-1
Input 4	SI4	9		i-1
Input 5	SI5	10		i-1
Input 6	SI6	11		i-1
Input 7	SI7	12		i-1
Input 8	SI8	13		i-1

Output signal

Name	Symbol	Connector pin no.	Description	I/O type
Output 1	SO1+ SO1-	1 2	<ul style="list-style-type: none"> Assign functions using parameters. For details, refer to the technical data—Basic function specification—SX-DSV02202. For factory default function assignment, refer to appendix “Specification for Each Model”. 	o-1
Output 2	SO2+ SO2-	25 26		
Output 3	SO3+ SO3-	3 4		

Encoder output signal

Name	Symbol	Connector pin no.	Description	I/O type
Phase A output	OA+	17	<ul style="list-style-type: none"> Differential output of divided encoder signal or external scale signal (A – B phase). (RS422 compatible) The ground of line driver of output circuit is connected to the signal ground (GND) and kept non-insulated. Maximum output frequency is 4 Mpps (multiplied by 4). Use a line receiver to receive the differential signals, and connect a termination resistor (Approx. 330 Ω) between the input terminals of the line receiver. Use a shielded twisted-pair cable for wiring, and connect the shield wire to the connector shell. 	Do-1
	OA-	18		
Phase B output	OB+	20		
	OB-	19		
Reserved	-	21

7-6 Feedback Scale Connector **X5**

Name	Connector pin no.	Description
Power supply output for feedback scale	1	EX5V (Note 2) (Note 3)
	2	EX0V (Note 1)
Feedback scale signal input / output (serial signal)	3	EXPS
	4	/EXPS
Feedback scale signal input (A / B / Z phase signal)	5	EXA
	6	/EXA
	7	EXB
	8	/EXB
	9	EXZ
	10	/EXZ
Frame ground	Shell	FG

Note 1: EX0V power supply output for feedback scale is connected with the signal ground of the X4 connector.

Note 2: EX5V power supply output for feedback scale and E5V power supply output for CS signal are rated at $5.2\text{ V} \pm 5\%$ and 300 mA at maximum. To use an feedback scale and CS signal with a current consumption higher than that, a preparation of an external power supply is required. Some feedback scales may take longer time in initialization after turning on the power.

Note 3: In case an external power supply is used for the feedback scale, make sure that the EX5V pin is open and no external power is supplied to the EX5V pin.

7-7 CS signal Connector **X6**

Name	Connector pin no.	Description
CS signal power supply output	1	E5V
	2	E0V (Note 1)
Reserved	3	Do not connect.
CS signal I/O	4	CS3 signal input
	5	CS2 signal input
	6	CS1 signal input
Frame ground	Shell	FG

Note 1: E0V power supply output for feedback scale is connected with the signal ground of the X4 connector.
Connect the ground of CS signal to E0V.

Note 2: EX5V power supply output for feedback scale and E5V power supply output for CS signal are rated at $5.2\text{ V} \pm 5\%$ and 300 mA at maximum. To use an feedback scale and CS signal with a current consumption higher than that, a preparation of an external power supply is required.

7-8 Monitor Connector X7

Name	Symbol	Connector pin no.	Description	I/O signal interface
Analog monitor output 1	AM1	1	<ul style="list-style-type: none"> Analog signal output for monitoring Monitoring object changes according to the parameter setting. 	Ao-1
Analog monitor output 2	AM2	2	<ul style="list-style-type: none"> For details, refer to the technical data—Basic function specification—SX-DSV02309. 	
Signal ground	GND	3	<ul style="list-style-type: none"> Signal ground 	—

Reserved	—	6	<ul style="list-style-type: none"> Do not connect 	—

I/O signal interface

i-1o-1

Note: To directly run the relay, attach a diode in parallel with the relay and in the direction shown in the figure above.
VCE sat = 1.2 V

Ao-1

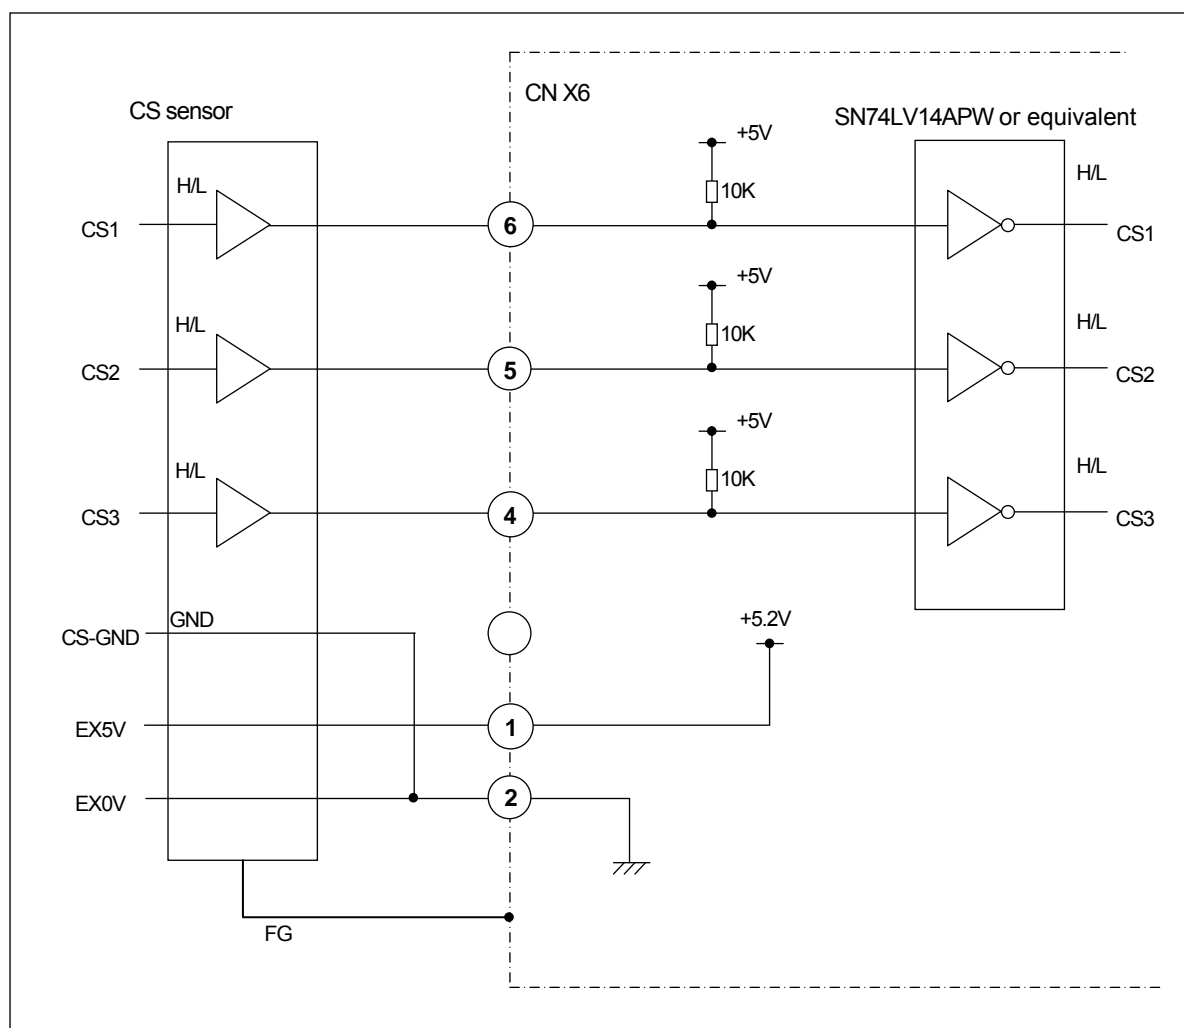

Output signal amplitude is $\pm 10V$

Do-1**Equivalent of AM26C31**

+: Pins 17, 20, 21, -: Pins 18, 19, 22

Connect a terminating resistor (approx. 330 Ω) between the input terminals of the line receiver.

CS signal interface

(Note) Refer to technical document SX-DSV02309 for the relation of the move direction of CS signal and the linear motor.

8. Wiring

8-1 Used Cables and Maximum Cable Lengths

Name	Symbol	Maximum cable length	Used cable
Main power supply	L1, L2, L3	—	Refer to the associated specification available separately.
Control power supply	L1C, L2C	—	HVSF 0.75 mm ²
Motor connection	U, V, W, 	20 m	Refer to the associated specification available separately. (Note 1)
Earth cable		1 m	Refer to the associated specification available separately.
Scale connection	X6	20 m	Overall twisted shielded pair Core wire: 0.18 mm ² or larger
I/O connection	X4	3 m	
RTEX connection	X2A/X2B	100 m (Note 2)	Twisted shielded pair (STP) cable of category 5e or better

Note 1: When using Tyco Electronics AMP connectors (172167-1, 172189-1) as motor junction connector, maximum applicable conductor size is 1.3 mm².

Note 2: Refer to 8.3 (5) Connection to connectors **X2A** and **X2B**.

8-2 Cable Side Connector

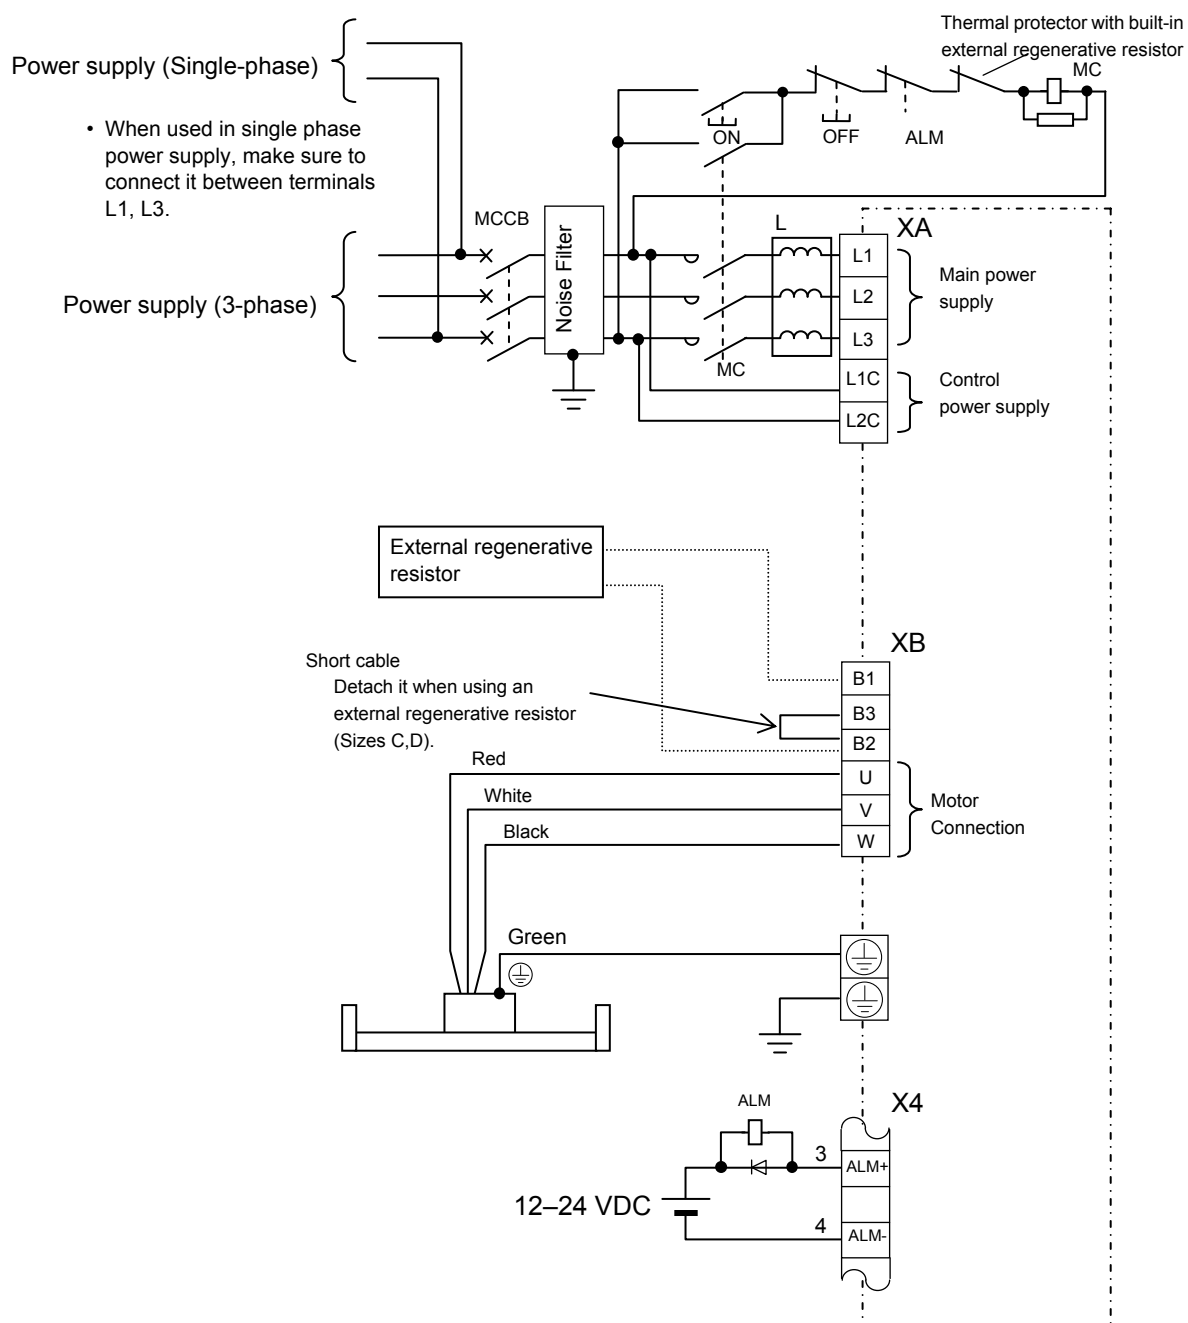

Connector symbol	Part name	Part number	Manufacturer
X3	Connector	2013595-1	Tyco Electronics
X4	Solder plug (soldering type)	10126-3000PE	Sumitomo 3M
	Shell kit	10326-52A0-008	
X5	Connector	MUF-PK10K-X	J. S. T. Mfg
X6	Connector	3E206-0100KV	Sumitomo 3M
		3E306-3200-008	
X7	Connector	51004-0600	Molex
	Connector pin	50011-8100	

Use connectors listed above or equivalents.

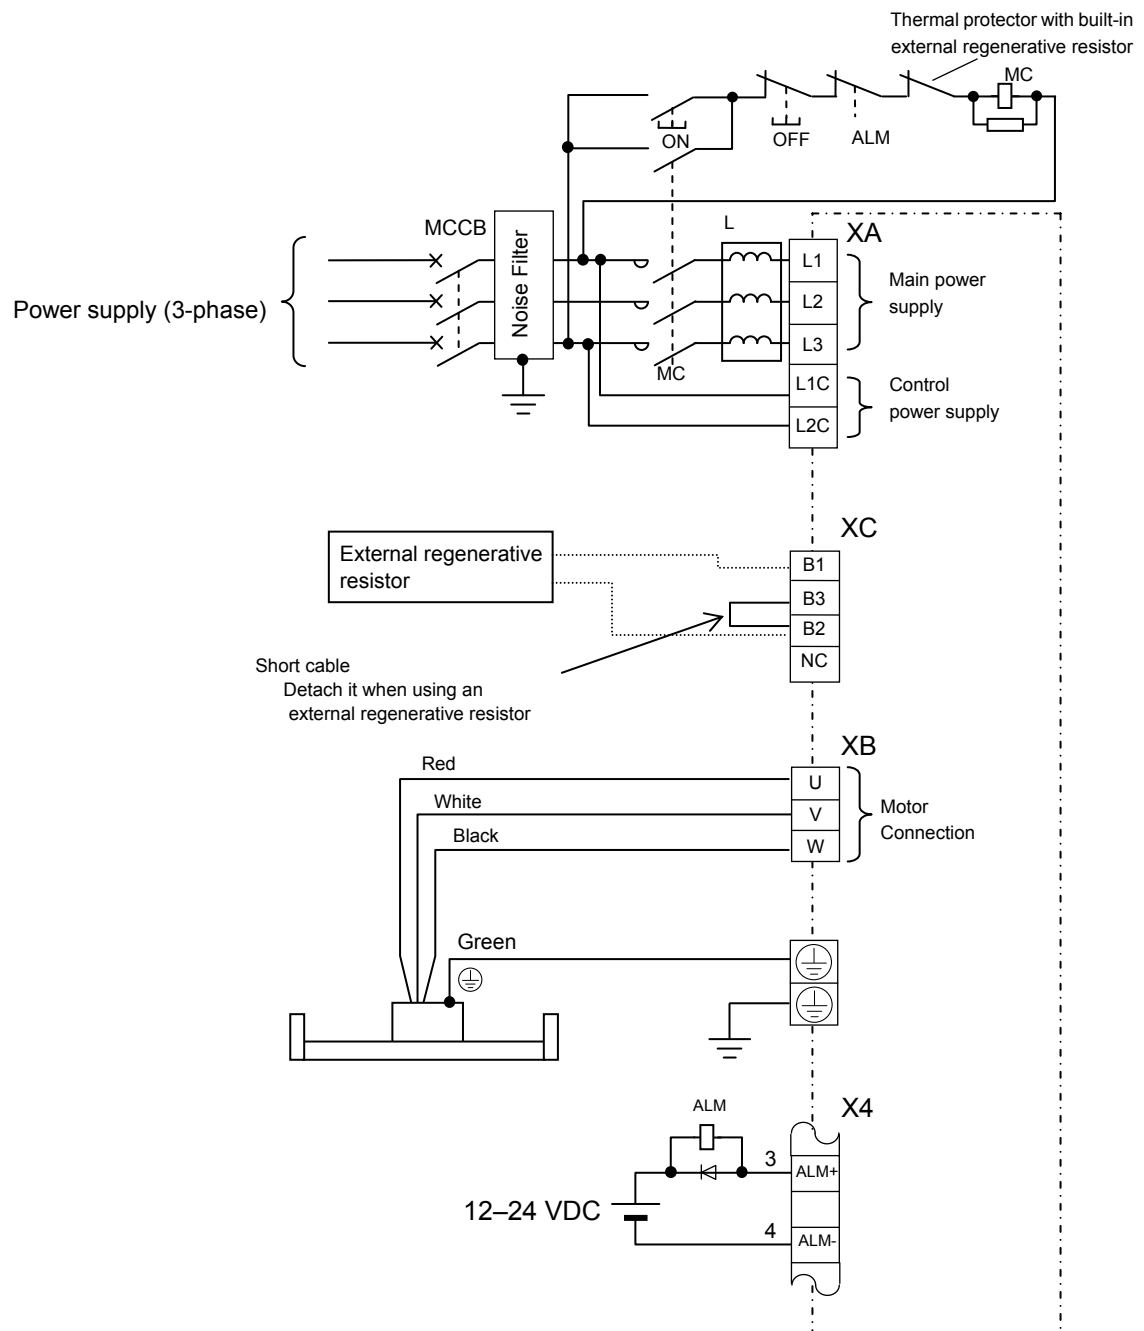

8-3 Precautions for Wiring

(1) Wiring to power connector and terminal block

100/200 V Sizes A–D:

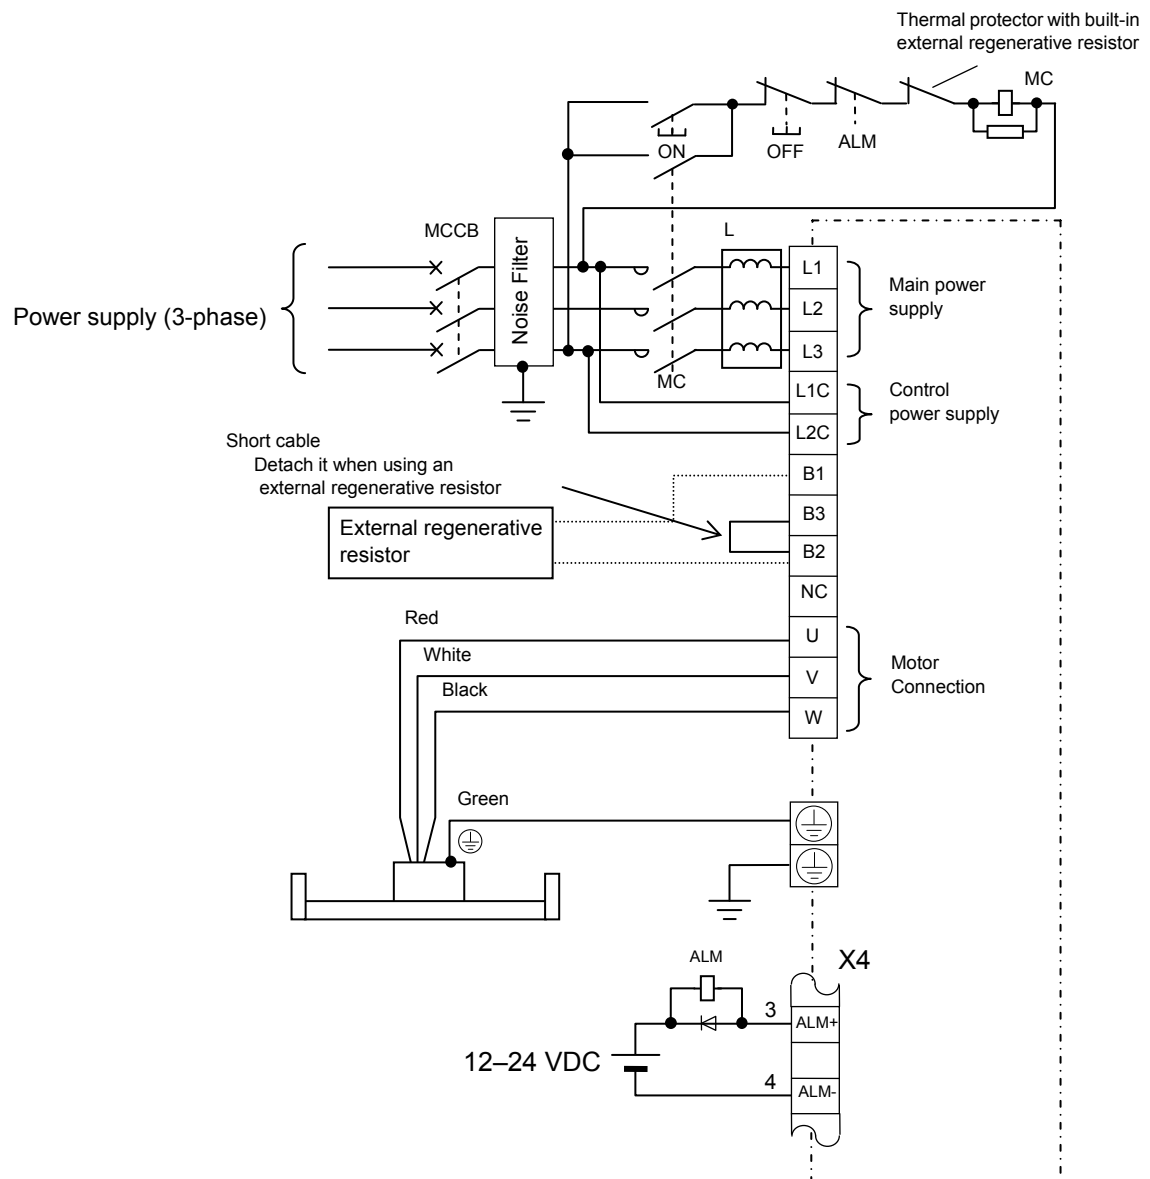

200 V Size E

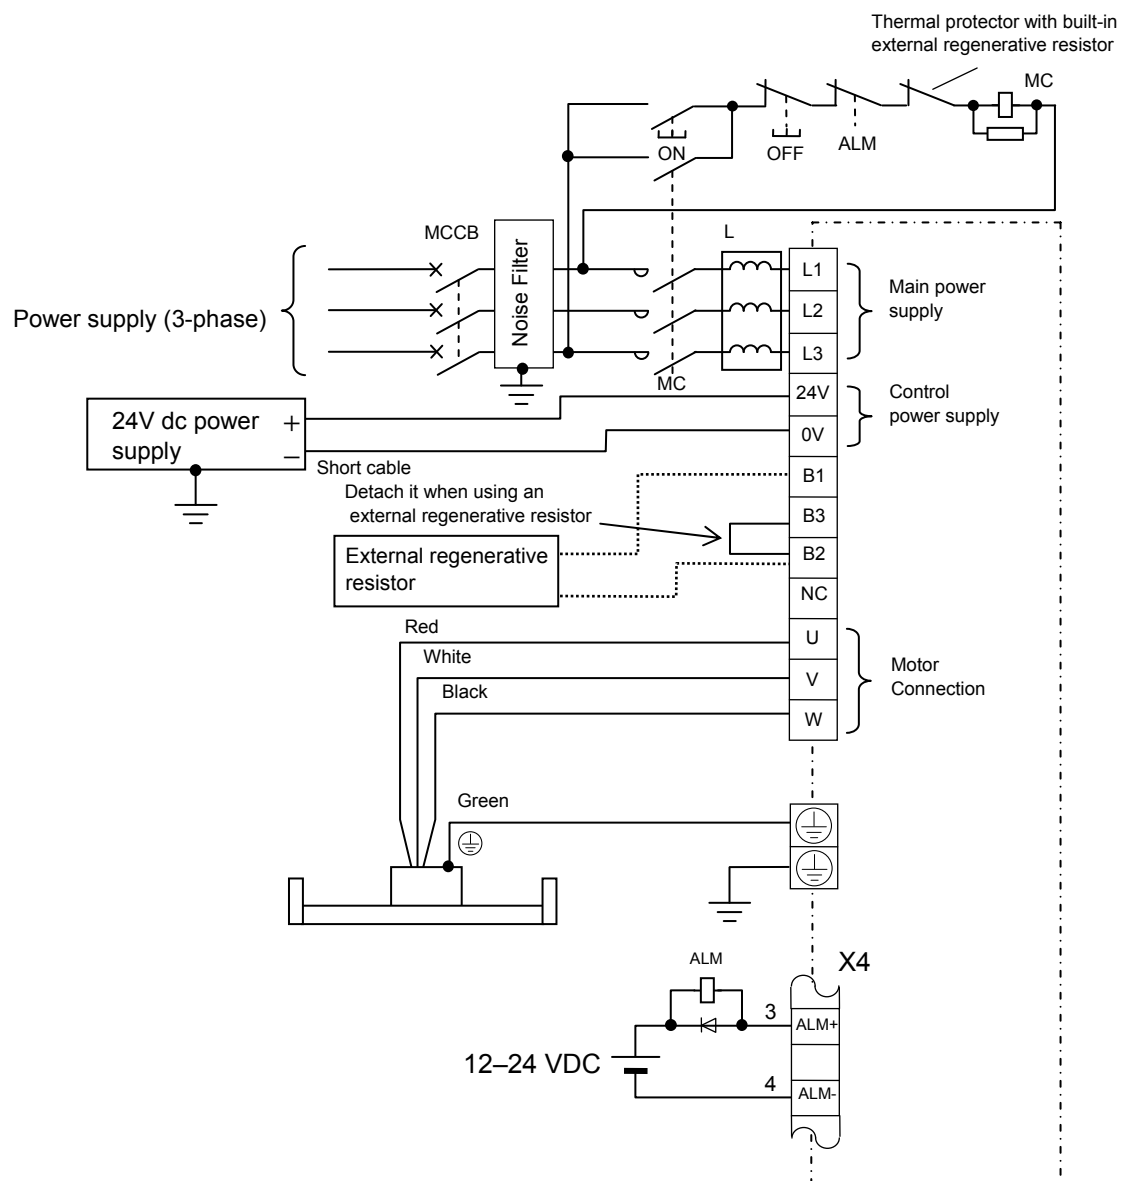

400 V Sizes D and E

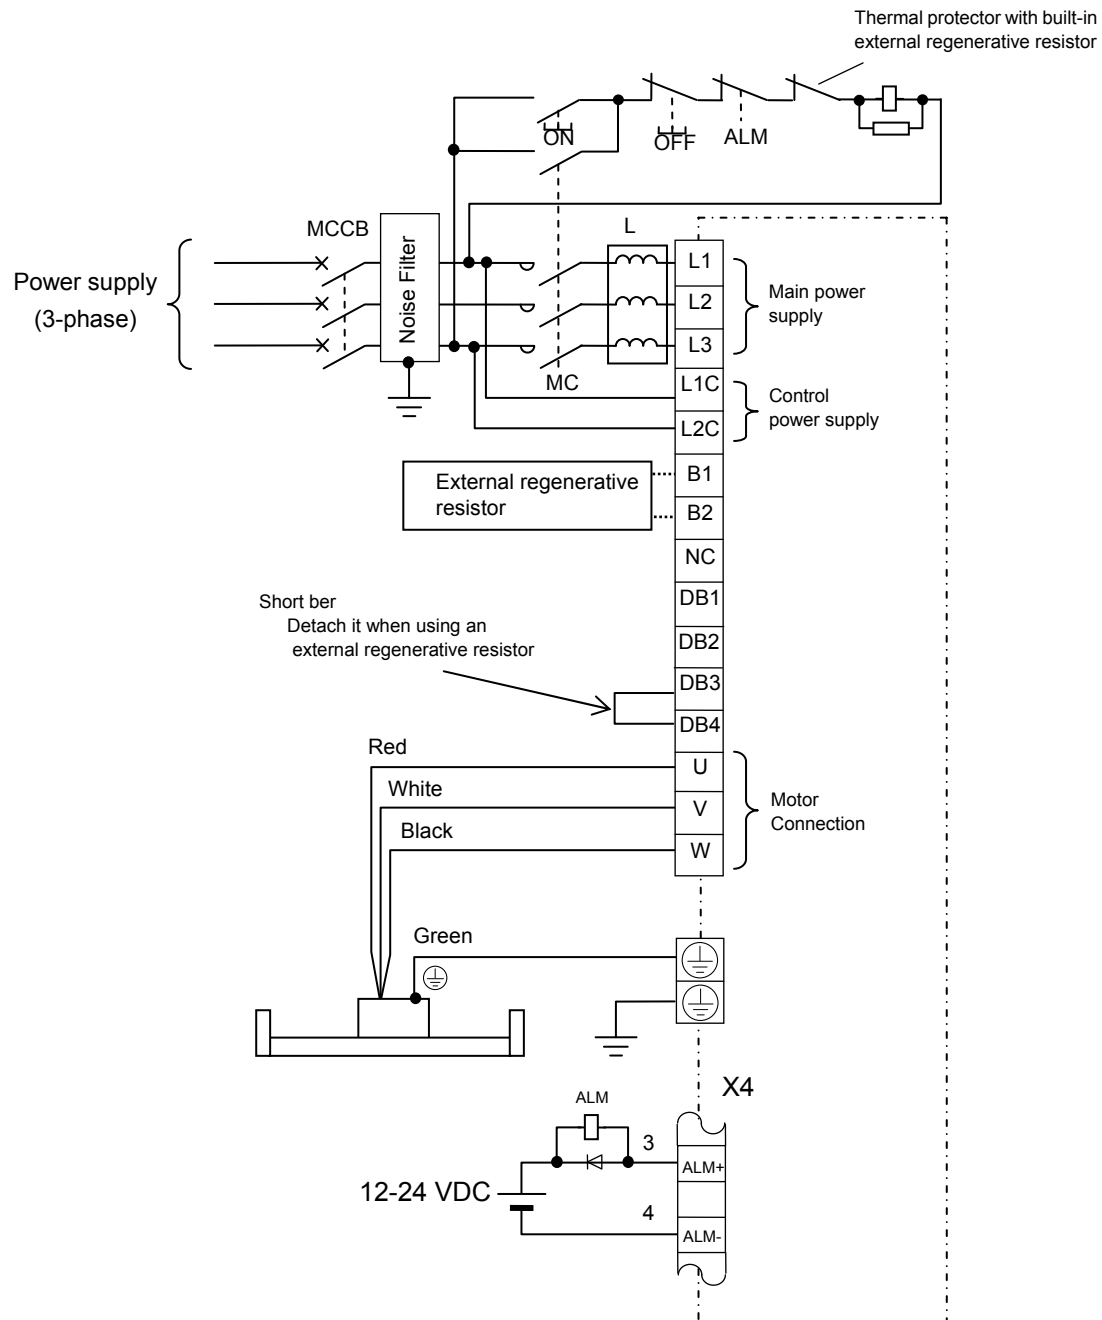

200 V Size F

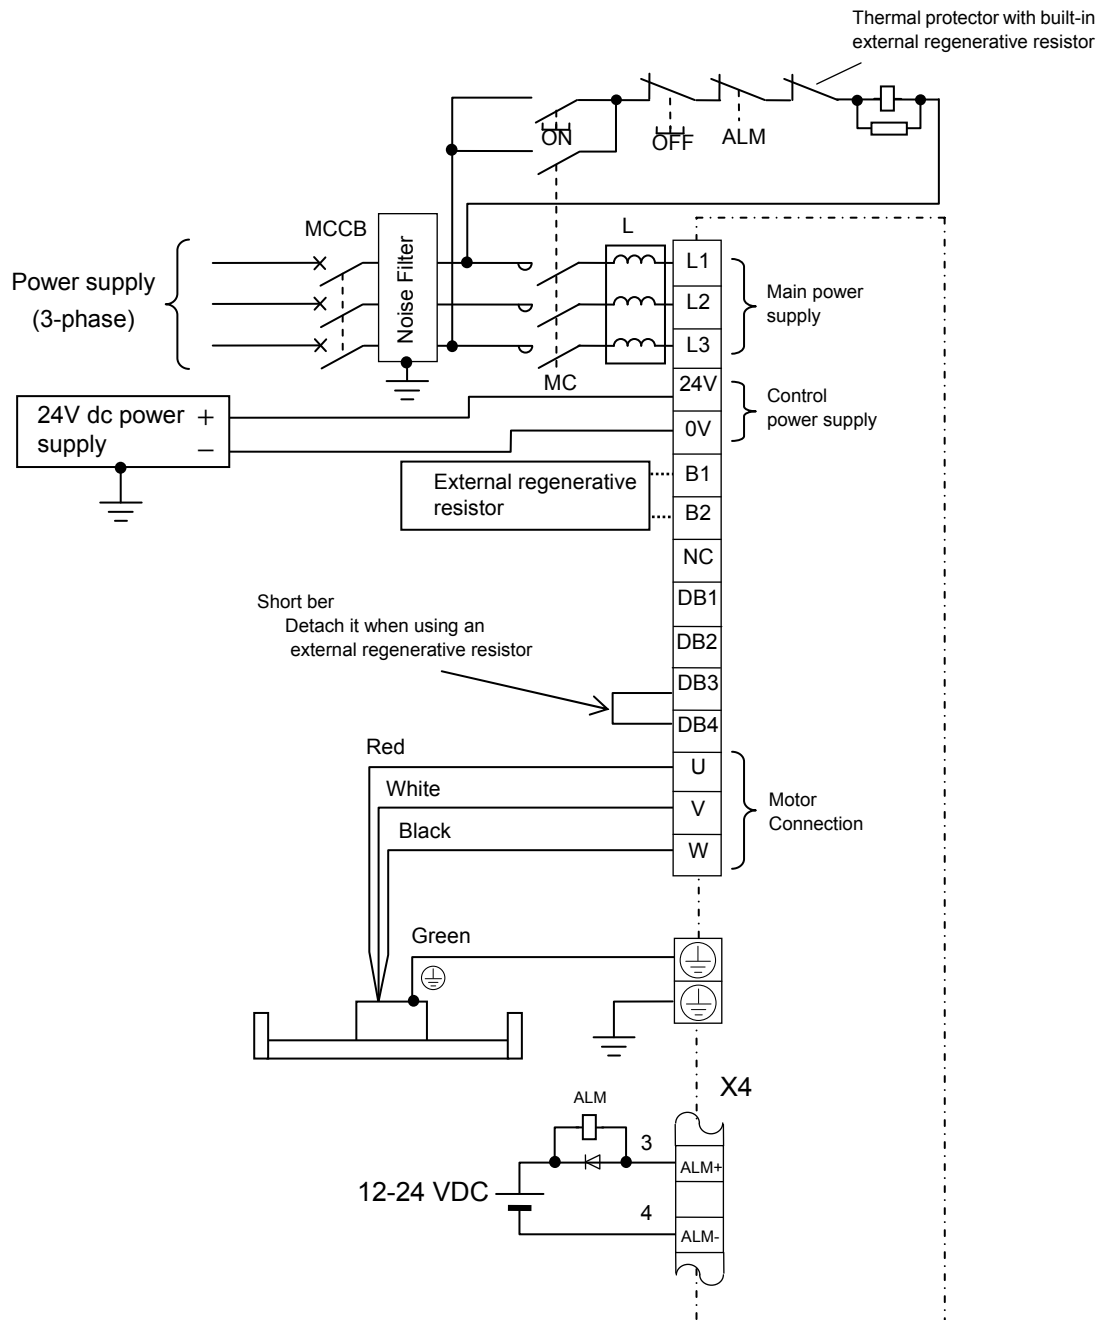

400 V Size F

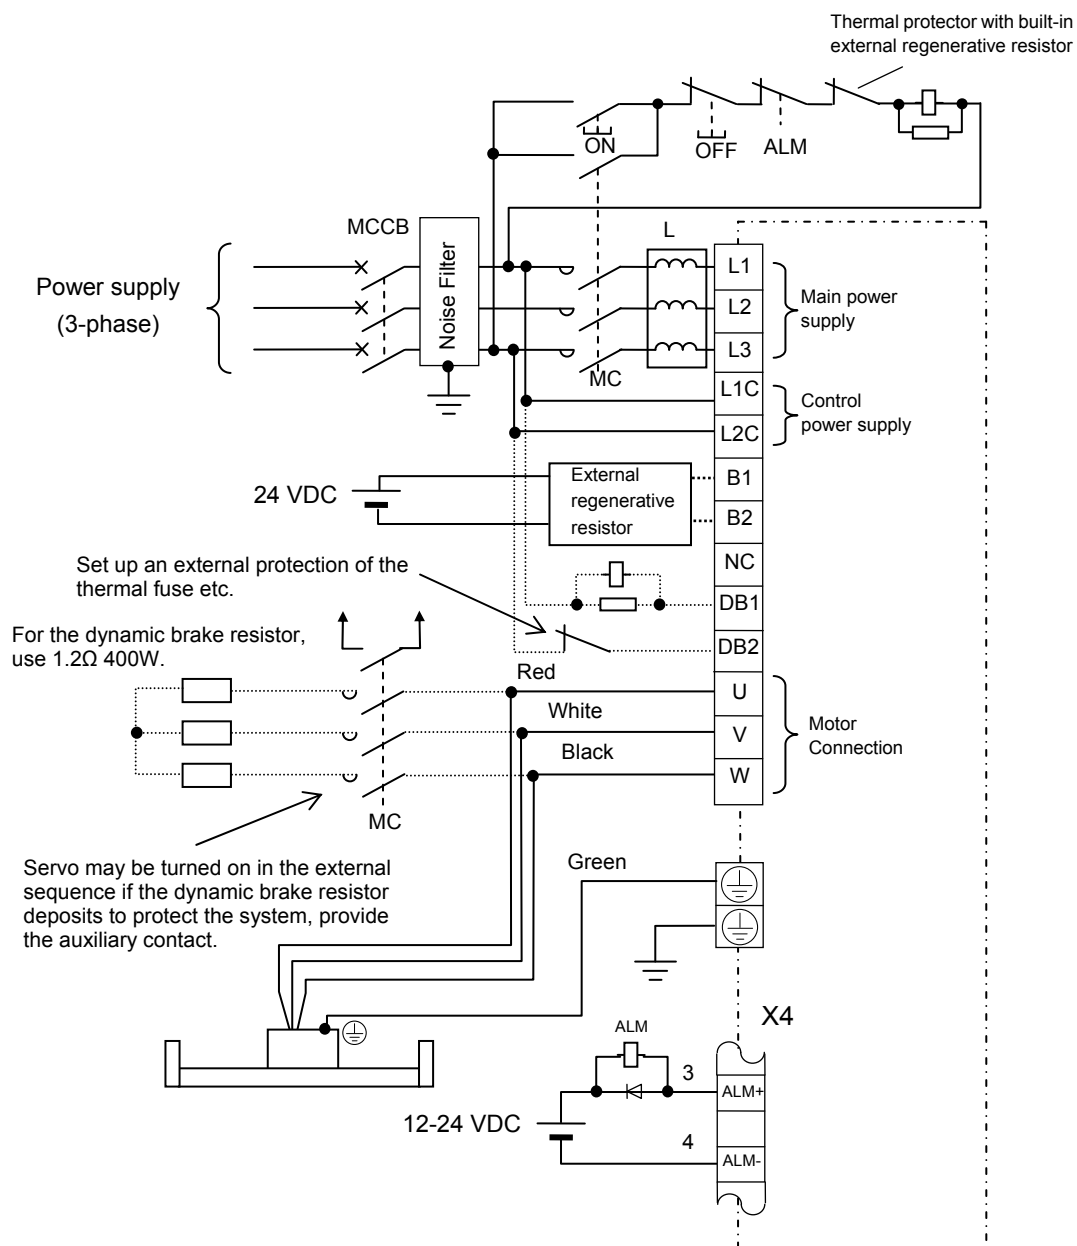

200 V Size G

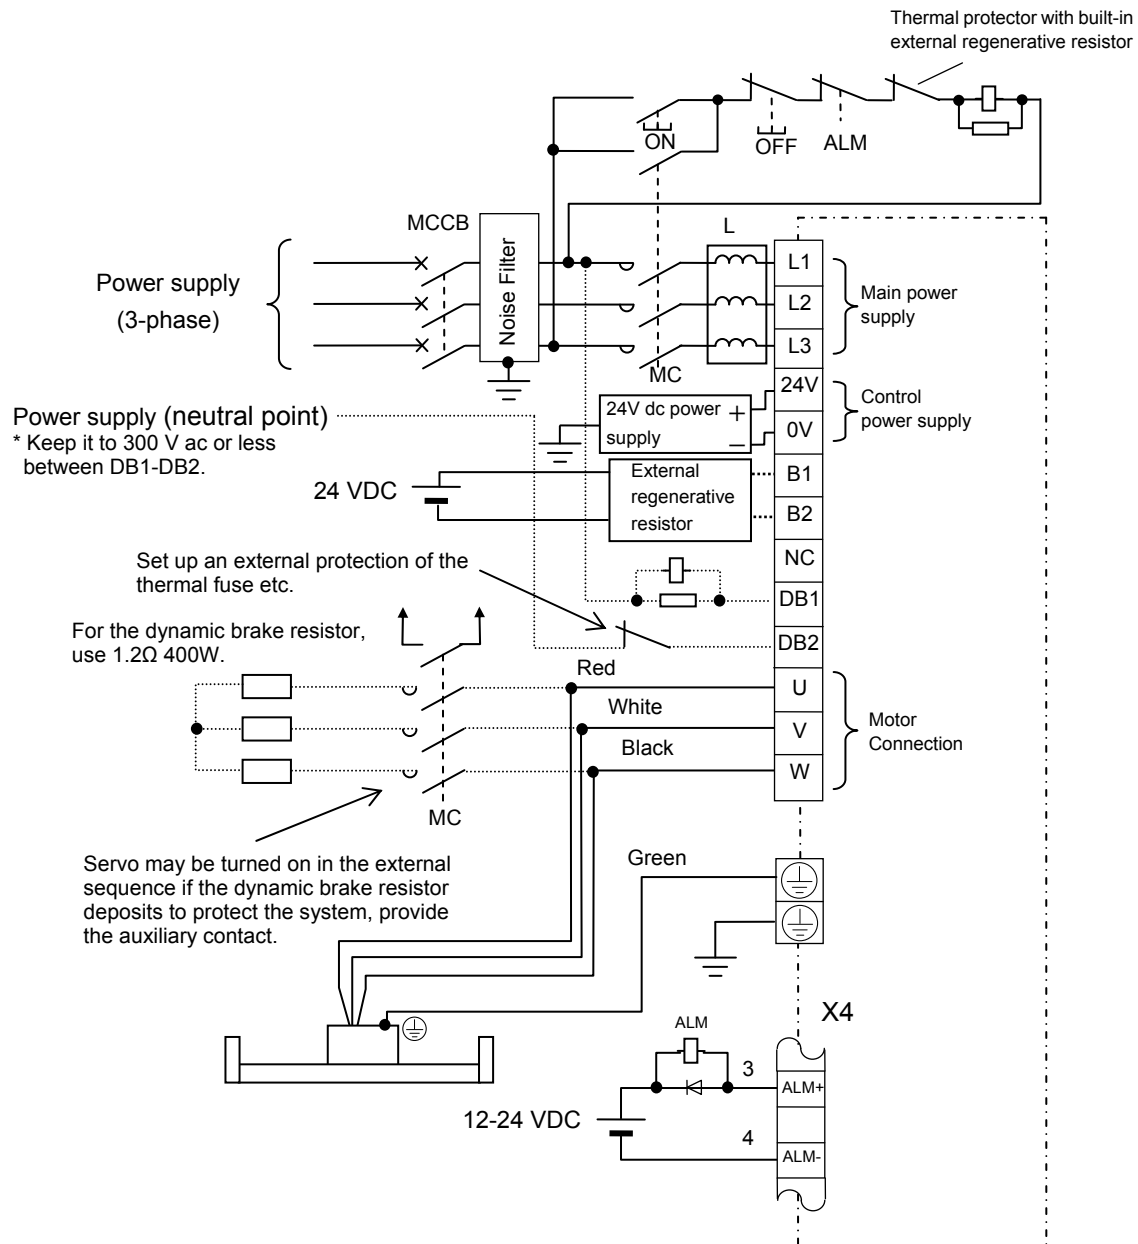

400 V Size G

200 V Size H

400 V Size H

- [1] When the servo driver uses single phase power supply for sizes A–D, connect the servo driver to the terminals L1, L3 of main power supply input. Do not connect anything to the terminal L2.
- [2] Surely insert the connector into place until it clicks.
- [3] Make sure to use an insulation coated crimp terminal when connecting to each terminal on the terminal block.
- [4] Terminal block cover is fixed with screws. When wiring to the terminal block, unscrew these screws to uncover the cover. Tighten the cover fixing screw with the torque of 0. 2 N•m or less.
- [5] Apply the power supply of the voltage indicated on the nameplate.
- [6] Do not reverse-connect the power input terminals (L1, L2, and L3) and the motor output terminals (U, V, and W).
- [7] Do not connect the motor output terminals (U, V, and W) to ground or short out them.
- [8] Because high voltage is applied to the power connectors XA, XB, XC, XD and the terminal block, never touch them on any account. It may cause electric shock.
- [9] For 750 W or higher models: When the installation is protected through the circuit breaker up to 20 A capacity, the maximum power available to the circuit is 5,000 Arms at 240 V. Do not overload the system.
- [10] An AC servomotor, unlike an induction motor, cannot change the rotation direction by exchanging three phases. Make sure to coincide the motor output terminals (U, V, and W) of the servo driver with the colors (pin number for cannon plugs) of the motor output cables.
- [11] Surely connect the ground terminals of the motor and the servo driver and earth the ground terminal as well as that of the noise filter. In addition, earth the equipment unit. To earth them, use the earth type D (ground resistance: 100 ohm or less) for grounding. (In order to avoid the impact of electrolytic corrosion, do not immediately have any contact between aluminum and copper.)
- [12] Attach the surge absorbing circuits for preventing noises to an electromagnetic contactor placed around the servo driver, a coil between relay contact points, and a brake winding of motor with a brake.
- [13] Attach the no fuse breaker. In case of emergency, make sure to power off outside the servo driver. To use an earth leakage circuit breaker, use that in which a high frequency wave countermeasure is taken.
- [14] In order to reduce the terminal noise voltage, install a noise filter.
- [15] Turn ON the power after the wiring was finished.

[16] About the regenerative resistor,

- The regenerative resistor is not built into A, B, G, and H frame.
- The regenerative resistor is built into F frame. The regenerative resistor becomes effective when the short-circuited between the terminal B2 and B3. Use it usually under such a condition.

(When shipping it, between the terminal B2 and B3 of A, B, G, and H frame is opened because the regenerative resistor is not built-in.)

When a trip occurs due to the regenerative load protection error, externally install a regenerative resistor.

To externally install a regenerative resistor, remove a connection cable between terminals B2 and B3 and then connect the regenerative resistor between terminals B1 and B2.

To use an external regenerative resistor, set Pr0.16 (external regenerative resistor selection) to 1 or 2.

- As for external regenerative resistor, we recommend the resistors below:

Size	Input power voltage		
	Single phase 100 V	Single/3 phase 200 V	3 phase 400 V
A	DV0P4280	DV0P4281 (100 W or less), DV0P4283 (200 W)	-
B	DV0P4283	DV0P4283	
C	DV0P4282	DV0P4283	
D	-	DV0P4284	DV0PM20048
E		DV0P4284 x 2 in parallel or DV0P4285 x 1	DV0PM20049
F		DV0P4285 x 2 in parallel	DV0PM20049 x 2 in parallel
G		DV0P4285 x 3 in parallel	DV0PM20049 x 3 in parallel
H		DV0P4285 x 6 in parallel or DV0PM20058	DV0PM20049 x 6 in parallel or DV0PM20059

* Electric power available without running the built-in thermal protector.

For safety, a temperature fuse and a thermal protector are built in.

- Configure the circuit so as to turn off the power supply when the thermal protector is running.
- The built-in temperature fuse can break according to the radiation condition, the used temperature range, the power supply voltage, and the load change.

Install a thermal fuse so that the surface temperature of the regeneration resistor does not exceed 100°C in a condition in which regeneration occurs easily (power supply voltage is high, load inertia is large, and deceleration time is short etc.) and perform an operation check.

- Attach the regenerative resistor on the incombustibles such as metal.
- Install the regenerative resistor so that people cannot directly touch it, such as the incombustible to cover it.
- Keep the temperature of places, which people can directly touch, below 70 deg. Celsius.

Method for connection to power connector

Use the following procedure for connection to connectors **XA**, **XB**, **XC** and **XD**.

<Method for connection>

1. Strip off the insulation of the wire

2. Insert a wire into the connector. The following 2 methods can be used to insert the wire.

- (a) Insert a wire using the lever attached.
- (b) Use a flat-head (-) screwdriver (with a tip width 3.0–3.5 mm).

- (a) Using the lever

[1] Press the lever attached above the upper slot with a finger to push down the spring.

[2] While pressing down the lever, insert a wire into the insertion opening (round hole) until it stops.

[3] Release the lever to connect the wire.

- (b) Using a screwdriver, Part 2

[1] Placing a dedicated screwdriver on the upper slot, press down the spring.

[2] Insert a wire, with the insulation stripped off correctly, into the wire insertion opening until it stops.

[3] Release the screwdriver to connect the wire.

<Precautions>

- Strip off correct length of insulation of a wire.
- When connecting a wire to the connector, be sure to disconnect the connector from the servo driver in advance.
- Insert only 1 wire into a wire insertion opening.
- Connected wire can be removed in the same way as it is inserted.
- Be careful not to be injured when using a screwdriver.

(2) Wiring to connector **X4**

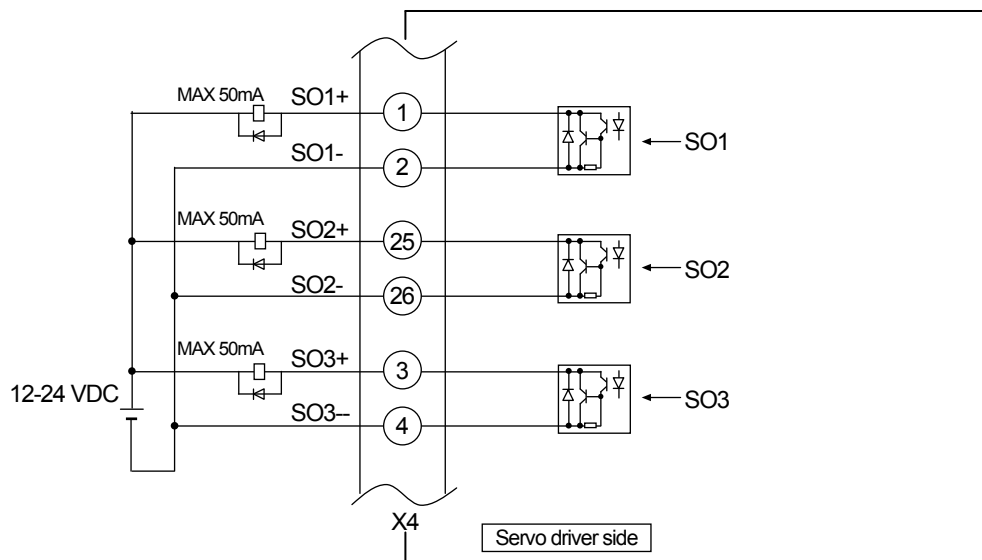

- [1] The 12–24 VDC power supply for the external control signal connected to the I-COM should be prepared by the customer.
 - [2] Place the servo driver and its peripheral device as nearly as possible (up to 3 m) so as to shorten the wiring.
 - [3] Wire the wiring as far away as possible (30 cm or more) from the power lines (L1, L2, L3, L1C, L2C, U, V, W, ).
- Do not put them in the same duct or bind them together.

Digital Input

The functions of the pins SI1-SI8 are assigned by parameters. For factory default settings, refer to Appendix “Specification for Each Model”.

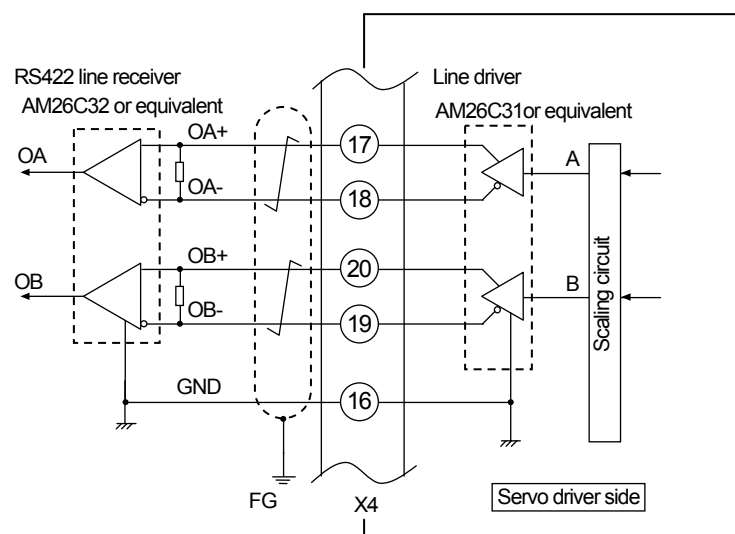

Digital Output

- [4] Be aware of the polarity of the power supply for control signals. The polarity connection contrary to the figure shown above can damage the servo driver.
- [5] To directly drive the relay with each output signal, make sure to attach a diode in parallel to the relay and in the direction as shown in the figure below. The servo driver can be damaged if the diode is not attached or the diode is attached in the reverse direction.
- [6] When a logic circuit such as a gate receives each output signal, take care so that a noise does not impact on the circuit.
- [7] Apply 50 mA or less of current to each output.

The functions of the pins S01-S03 are assigned by parameters. For factory default settings, refer to Appendix “Specification for Each Model”.

Feedback pulse of feedback scale

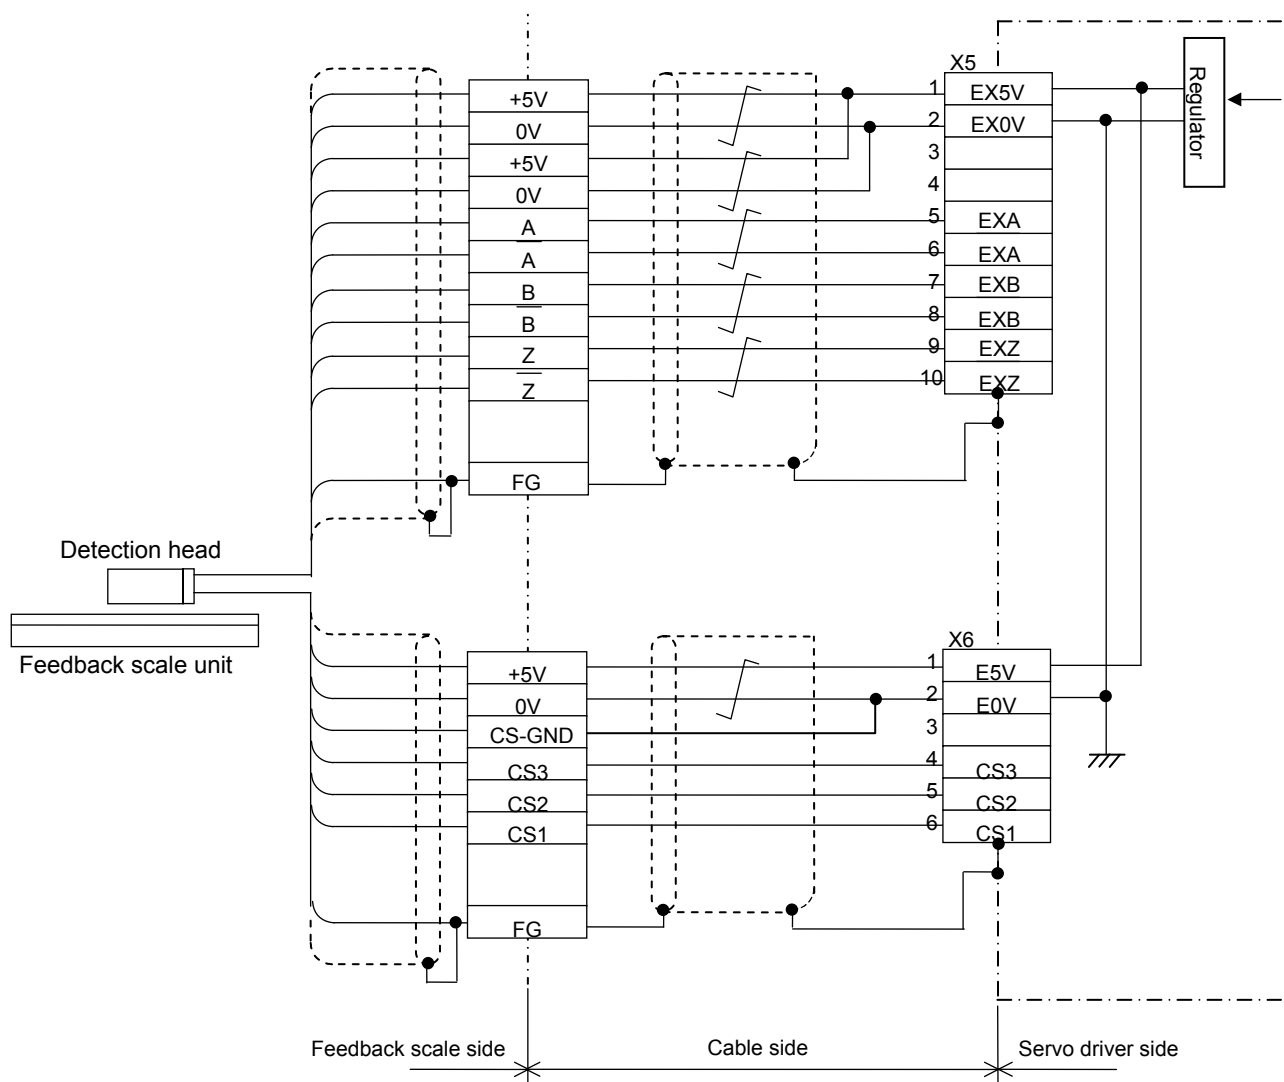

Note:

- [1] To receive the output pulse, use RS422 line receiver (AM26C32 or equivalent), with an appropriate termination resistor (approx. 330 Ω) connected across its inputs.

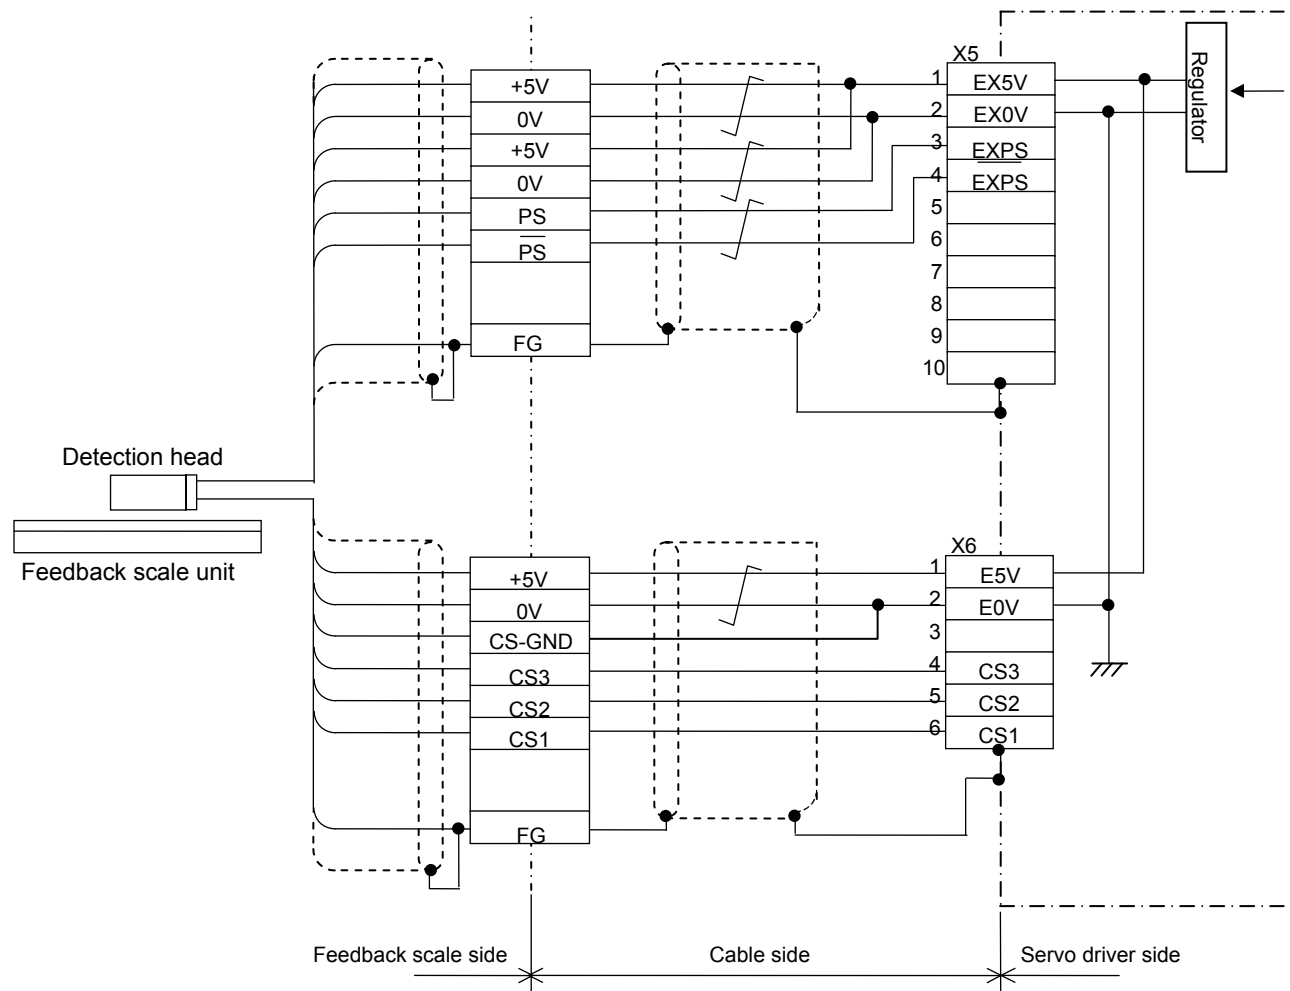

(3) Wiring to connector **X5** **X6**

- [1] As for the feedback scale and CS signal cable, use the batch shielded twisted wire pairs whose core is 0.18 mm² or more.
- [2] The cable length should be up to 20 m. When the wiring is long, we recommend you to use the double wiring for the 5 V power supply in order to reduce the impact of voltage drop.
- [5] Connect the coat of shielded cable at the motor side to the shield of shielded cable from the feedback scale and CS signal. Make sure to connect the coat of shielded cable at the servo driver side to the shell (FG) of **X5** and **X6**.
- [6] Wire the wiring as far away as possible (30 cm or more) from the power lines (L1, L2, L3, L1C, L2C, U, V, W, ).
- Do not put them in the same duct or bind them together.
- [7] Do not connect anything to the empty pins of **X5** and **X6**.
- [8] **X5** and **X6** are capable to supply up to 5.2 V \pm 5% 300 mA power supply. When using an feedback scale and CS signal at more consumption current than this, customer is responsible for the power supply. Some external scales may take longer time in initialization after turning on the power. Design the power supply so as to meet the running timing after power-on which is described in “Basic function specifications.”
- [9] When using a magnet pole position estimation function without CS signal, wiring of X6 is unnecessary.

The example of A/B phase, differential origin signal input type wiring

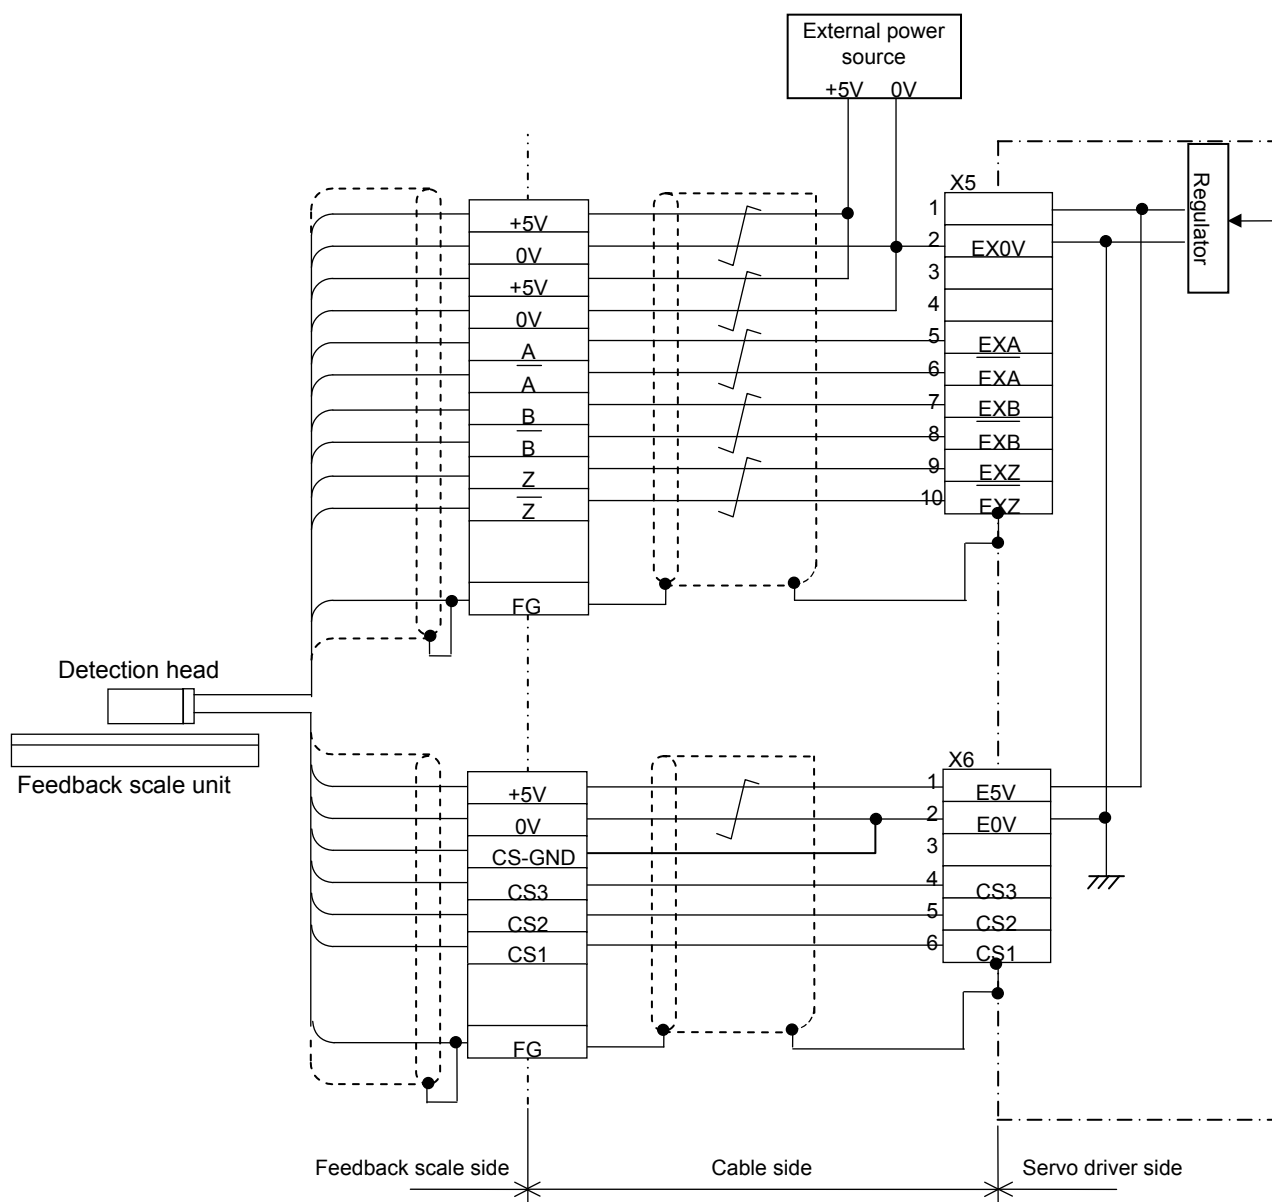

The example of serial communication type wiring

The example of A/B phase, differential origin signal input type wiring with the external power supply

(Note 1) Connect the ground of the external power supply and sensor to EX0V pin.

(Note 2) Do not connect with EX5V pin. And do not supply EX5V pin with power supply from the exterior.

(5) Wiring to connector **X2A**, **X2B**

[1] Use shielded twisted pair (STP) compatible with category 5e of SIA/EIA-568 or higher specifications.

If both ends of the shield are not grounded, EMC performance will degrade.

When installing connector plug on both ends of shielded cable, positively connect the shield to the metallic plug shell.

For colors of wire and matching connector pins, refer to TIA/EIA568B (see figure below).

Pins 3 and 6 are for signal wire.

Connect wire to 3 pin pairs on the connector: 1–2, 4–5 and 7–8.

When using 2-pair wire in place of 4-pair wire, use pins 1–2 and 3–6 and leave pins 4–5 and 7–8 on connector unconnected.

[2] Length of communication cable

- | |
|---|
| a. Between 2 nodes: max. 100 m |
| b. Total length of cables between all nodes in the communication loop: max. 200 m |

Both requirements should be met.

If the requirement b above cannot be met, consult with us.

Because specifications such as flexural characteristic, temperature range and insulation material differ from manufacturer to manufacturer, select the cable best suitable for your application.

Select the cable for movable application according to your operating condition.

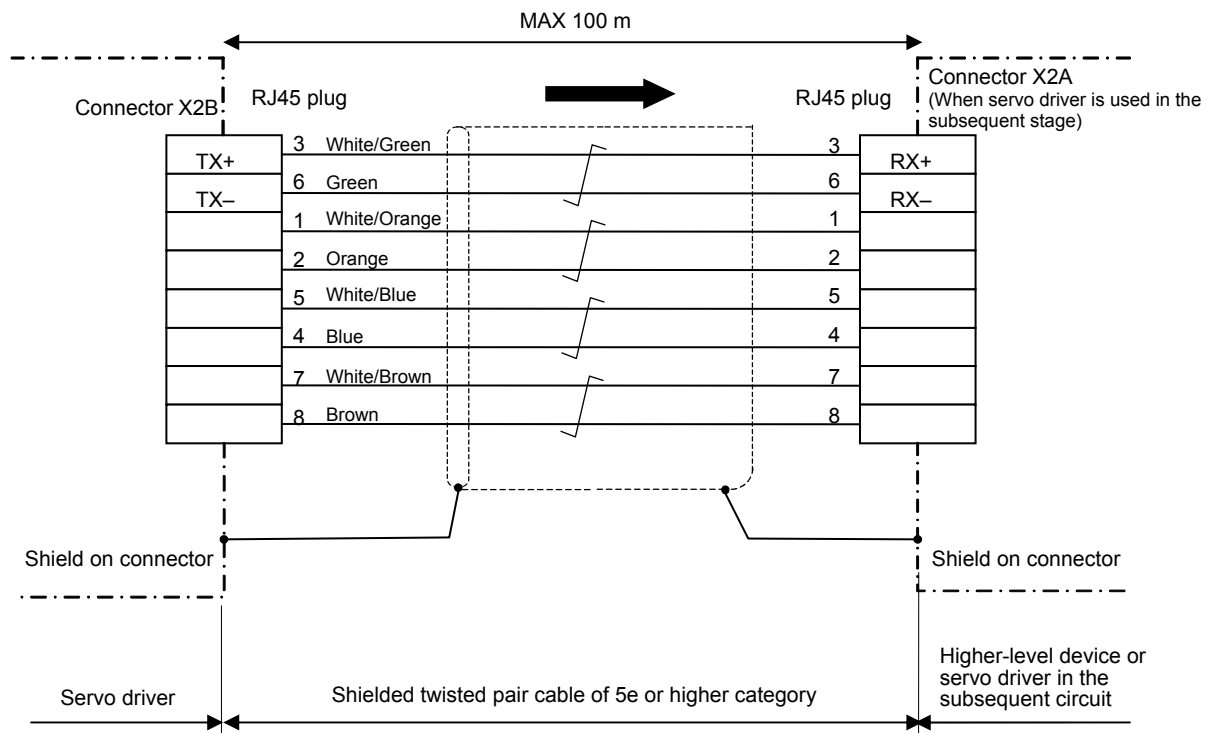

<Communication cable used in our evaluation>

9. Compliance with European EC Directive/UL Standard

9-1 European EC Directive

European EC directive is applied to all electronic products that are exported to EU, have the inherent functions, and are directly sold to the consuming public. These products are obliged to be compliant with the unified EU safety standard and paste the CE marking indicating the compliance to the products.

Our products, in order to make it easy for the embedded equipment and devices to be compliant with EC directive, provide the compliance with the standards associated with low voltage directive.

9-1-1 Compliance with EMC Directive

Our servo system determines the model (conditions) such as the installed distance and the wiring of the servo driver and the servo motor and makes the model compliant with the standards associated with EMC directive. When equipment and devices are embedded in practice, wiring and grounding conditions, etc. may be not the same as the model. Thus, it is necessary to measure how the final equipment and devices where the servo driver and the servo motor are embedded are compliant (especially unnecessary radiation noise, noise terminal voltage) with EMC directive.

9-1-2 Conforming Standards

		Servo driver	Motor
European EC directive	EMC directive	EN55011 EN61000-6-2 EN61800-3	
	Low voltage directive	EN61800-5-1	IEC60034-1 IEC60034-5
	Machinery Directives Functional Safety (For A5N9 Series only)	EN954-1(Cat.3) ISO13849-1 (PL c,d*1)(Cat.3) EN61508(SIL 2) EN62061(SIL 2) EN61800-5-2(STO) IEC61326-3-1	
UL standard		UL508C (File No. E164620)	UL1004 (File No. E166557)
CSA standard		C22. 2 No. 14	C22. 2 No. 100

IEC : International Electrotechnical Commission
 EN : Europaischen Norman
 EMC : Electromagnetic Compatibility
 UL : Under writers Laboratoris
 CSA : Canadian Standards Association
 ISO : International Organization for Standardization

*1 The condition of PL d is using EDM.

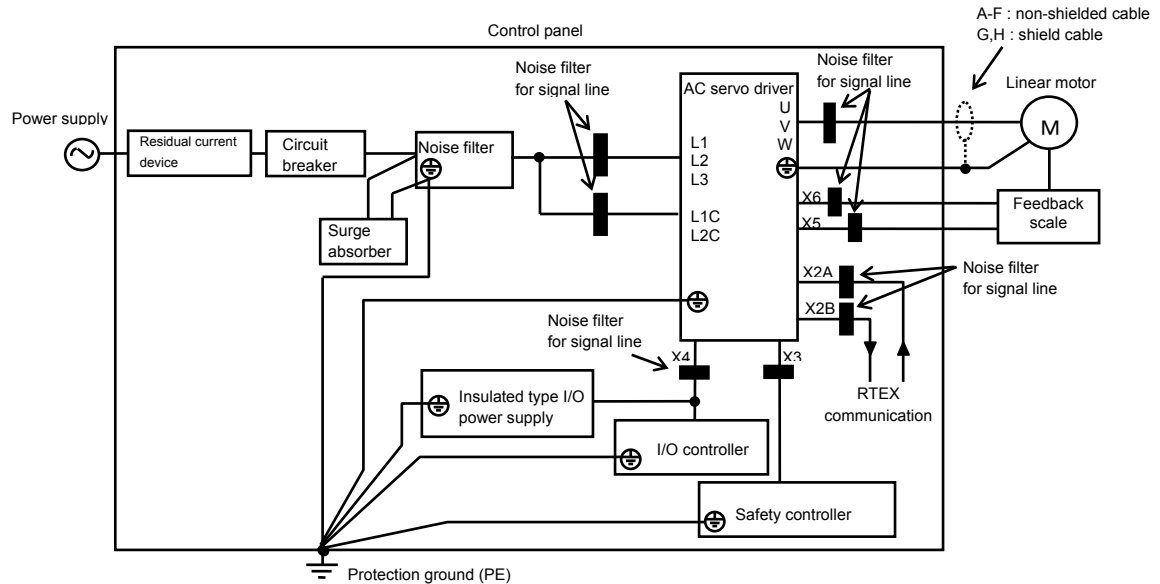

9-2 Peripheral Device Configuration

9-2-1 Installation Environment

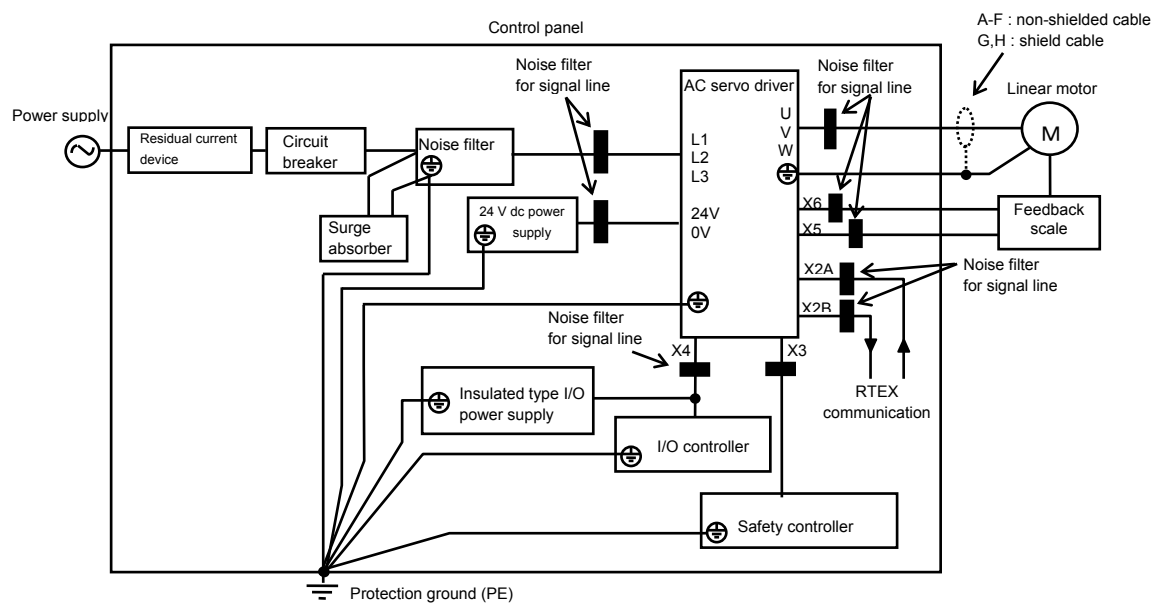

Use the servo driver under the environment of pollution level 2 or 1 defined in IEC60664-1.

(Example: Installed in the IP54 control panel.)

- 100 V/200 V system

- 400 V system

9-2-2 Power Supply

100 V system: Single phase 100 V – 120 V $\begin{smallmatrix} +10\% \\ -15\% \end{smallmatrix}$ 50/60 Hz

200 V system (Sizes A–D): Single/ 3 phase 200 V – 240 V $\begin{smallmatrix} +10\% \\ -15\% \end{smallmatrix}$ 50/60 Hz

200 V system (Sizes E–H): 3 phase 200 V – 230 V $\begin{smallmatrix} +10\% \\ -15\% \end{smallmatrix}$ 50/60 Hz

400 V system (Sizes D–H): 3 phase 380 V – 480 V $\begin{smallmatrix} +10\% \\ -15\% \end{smallmatrix}$ 50/60 Hz

Control power supply 24 V dc +/- 15%

- (1) Use it under the environment of overvoltage category II defined in IEC60664-1.
- (2) As for the interface power supply, use the CE marking conforming product or the 12–24 VDC power supply of insulation type compliant with EN standard (EN60950).

9-2-3 Circuit Breaker

Make sure to connect a circuit breaker compliant with IEC standard and UL certification (marked with LISTED, ) between the power supply and the noise filter.

9-2-4 Noise Filter

To install one noise filter as a whole in the power unit when multiple servo drivers are used, consult the noise filter manufacturer.

9-2-5 Surge Absorber

Install the surge absorber in the primary side of the noise filter.

Please!

To carry out a pressure test of equipment and devices, make sure to detach the surge absorber.

Otherwise, the surge absorber can be damaged.

9-2-6 Noise Filter for Signal Line

Install the noise filters for signal lines in all cables (power supply, motor, encoder, and interface cables).

For size D, install three noise filters in the power supply cable.

9-2-7 Grounding

- (1) In order to avoid an electric shock, make sure to connect a protection ground terminal () of the servo driver and the protection ground (PE) of the control panel.
- (2) Do not tighten the connection to the ground terminal () along with other parts. The servo driver has two ground terminals.

9-3 List of Peripheral Devices Applicable to Servo Driver

- Select the specification common to single/3 phase 200 V according to the power supply.
- To become compliant with European EC directive, make sure to connect a circuit breaker compliant with IEC standard and UL certification (marked with LISTED) between the power supply and the noise filter.

Please!

- Select a circuit breaker and a noise filter with the capacity comparable to the power capacity (by taking into account the load condition).
- Terminal block and earth terminal

For wiring, use the copper conductor cable of the temperature rating 75 deg. Celsius or more.

	L1,L2,L3,B1,B2,NC,U,V,W	M5	2.0-2.4		
H	L1C,L2C,24V,0V,DB1,DB2	M4	0.7-1.0	M5	2.0-2.5
	L1,L2,L3,B1,B2,NC,U,V,W	M6	2.2-2.5		

- Tightening torque view (Earth terminal and I/O connector X4)

Driver		Earth terminal		I/O connector X4	
Frame		Nominal designation	Tightening torque (Nm)	Nominal designation	Tightening torque (Nm)
A-E		M4	0.7-0.8	M2.6	0.3-0.35
F,G		M5	1.4-1.6		
H		M6	2.4-2.6		

- The terminal block can be damaged if the screw tightening torque exceeds the maximum value.
- For the earth wire dia. and dynamic brake resistor wire dia., use more than the motor wire diameter.
- For Sizes A–E, use the dedicated connector which came with the product.

In this case, the stripped cable length should be 8–9 mm.

	Optional Part Number	Part Number of Manufacturer	Manufacturer

9-4 Compliance with UL Standard

Certified by the UL508C (file No. E164620) standard by observing the installation conditions [1], [2] below.

[1] Use the servo driver under the environment of pollution level 2 or 1 defined in IEC60664-1. (Example: Installed in the IP54 control panel.)

[2] Make sure to connect a circuit breaker or fuse compliant with UL certification (marked with LISTED, ) between the power supply and the noise filter.

For information about rated current of the circuit breaker/ fuse, refer to “9-3 List of Peripheral Devices Applicable to Servo Driver”.

For wiring, use the copper conductor cable of the temperature rating 60 deg. Celsius or more.

The terminal block can be damaged if the screw tightening torque exceeds the maximum value (M4: 1.2 N•m, M5: 2.0 N•m.).

[3] Overload protection level

The overload protection function of the servo driver works when the effective current will be 115% or more of the rated current based on the time property. Check that effective current of the servo driver does not exceed the rated current by monitoring the load factor using PANATERM or by other methods. Set up the maximum instantaneous allowable current at the Pr 0.13 (first torque limit) and Pr 5.22 (second torque limit).

[4] The servo driver will comply with UL in the power supply environment of 5,000 Arms or lower.

[5] Motor over-load-temperature protection shall be provided at the final installation upon required by the NEC (National Electric Code).

10. Compliance with SEMI F47 Instantaneous Stop Standard

- This function corresponds to the F47 power supply instantaneous stop standard in the SEMI standard during no/ light load condition.
- Useful when used in the semiconductor manufacturing equipment.

Warning:

[1] Not applicable to the servo driver which has a single phase 100 V specification and a 24 VDC specification for control power input.

[2] Make sure to evaluate and confirm the compliance with F47 power supply instantaneous stop standard with an actual device.

11. Compliance with KC mark

Conformity of Korea Certification mark is registered by suiting EMC directive.

Registration No. KCC-REM-FAN-M-D

SAFETY PRECAUTIONS

12. Safety Precautions

- Danger and damage caused when the safety precautions are ignored are described in the following categories and signs:

 DANGER	Description of this sign indicates “urgent danger that may cause death or serious injury.”
 CAUTION	Description of this sign indicates “danger that may cause injury or property damage.”

- Rules to keep are categorized and described with the following graphics.

	This graphic indicates “Prohibited” acts that are not permitted.
	This graphic indicates “Mandatory” acts that must be performed forcibly.

DANGER

- (1) Be sure not to store or use the equipment under conditions subjected to vibrations (5.88 m/s² or heavier) or an impact shock, foreign matters such as dust, metal particles oil mist, liquids such as water, oil and polishing liquid, near flammable objects, in an atmosphere of corrosive gas (such as H₂S, SO₂, NO₂, Cl₂), or in an atmosphere of flammable gas.
- (2) Do not place any flammable objects near a motor, a servo driver, or a regenerative resistor.
- (3) Do not drive the motor with an external force.
- (4) Do not damage or strain the cable, or do not apply excessive stress. Do not place a heavy item on the cable or do not pinch the cable.
- (5) Do not use the equipment with the cable soaked in oil or water.
- (6) Do not install the equipment near a heating object such as a heater or a large wire-wound resistor. (Install a thermal shield, etc. to avoid the influences of heating object.)
- (7) Do not use the equipment under conditions subject to strong vibrations or an impact shock.
- (8) Be sure not to touch a rotating part of a motor during operation.
- (9) Be sure not to touch inside a servo driver.
- (10) Motor servo driver heat sink and peripheral device become very hot. Do not touch them.
- (11) Do not carry out wiring or do not operate the equipment with wet hands.
- (12) Wiring work is strictly allowed only for an engineer specializing electrical work.

SAFETY PRECAUTIONS

- (13) A motor other than specified is not provided with a protection device. Protect a motor with an overcurrent protection device, a ground-fault interrupter, overheating protection device, and emergency stop device, etc.
- (14) When operating the servo driver after an earthquake, inspect installation conditions of the servo driver and the motor and safety of the equipment to make sure that no fault exists.
- (15) After turning off the power, the inside circuit remains charged at a high voltage for a while. When moving, wiring or inspection the equipment, completely shut off the power supply input outside the servo driver and leave for 15 minutes or longer before working.
- (16) Install and mount the equipment securely to prevent personal injury caused by poor installation or mounting on an earthquake.
- (17) Install an external emergency shutoff circuit to stop operation and interrupt power immediately upon emergency.
Emission of smoke or dust may occur due to a fault of a motor or a servo driver used in combination. For example, if the system is energized with the regenerative control power transistor shorted by failure, overheating of a regenerative resistor installed outside the servo driver may occur and it may emit smoke and dust. If a regenerative resistor is connected outside a servo driver, provide a means of detecting overheating such as a thermal protector to shut off power upon detecting abnormal heating.
- (18) Mount the motor, the servo driver and the peripheral devices on a noncombustible material such as metal.
- (19) Provide correct and secure wiring. Insecure wiring or incorrect wiring may cause runaway or burning of a motor. During wiring work, avoid entry of conductive dust such as wire chippings in a servo driver.
- (20) Connect cables securely and provide secure insulation on current-carrying parts using insulation material.
- (21) Be sure to install a fuseless breaker in a power supply. Be sure to connect grounding terminals and grounding wires.
To prevent an electric shock and malfunction, Class D grounding (grounding resistance at 100 Ω or lower) or higher grade is recommended.

CAUTION

- (22) Do not adjust or change servo driver gains extremely, and do not make operations of the machine instable.
- (23) The equipment may suddenly restart after recovery from shutdown upon a power failure. Keep away from the equipment.
Specify settings of the equipment to secure safety for human against such restart operations.
- (24) When the equipment is energized, keep away from the motor and mechanism driven by the motor in case of malfunction.
- (25) Avoid a strong shock to the product.
- (26) Be sure not to use the electromagnetic contactor installed on the main power supply to start or stop the motor.
- (27) Avoid frequent switching on and off the main power supply of the servo driver.

SAFETY PRECAUTIONS

- (28) Do not fall or topple over the equipment when carrying or installing.
- (29) Do not block radiation slits of the servo driver and do not put a foreign matter into the servo driver.
- (30) Do not use the equipment under direct sunlight. When storing the equipment, avoid direct sunlight and store under conditions of operating temperatures and humidity.
- (31) Be sure not to disassemble or modify the equipment.
Disassembling and repair is allowed only for the manufacturer or sales agency authorized by the manufacturer.

- (32) Use a motor and a servo driver in combination specified by the manufacturer. A customer shall be responsible for verifying performances and safety of combination with other servo driver.
- (33) A failure of a motor or a combined servo driver may cause burning of motor, or emission of smoke and dust. Take this into consideration when the application of the machine is clean room related.
- (34) Install the equipment adequately in consideration of output and main unit weight.
- (35) Keep the ambient conditions of an installed motor within a range of allowable ambient temperatures and of allowable humidity.
- (36) Install the equipment by specified procedures and in specified orientation.
- (37) Install the devices by keeping specified distances between a servo driver and inside control panel or other devices.
- (38) For a test run, hold down a motor and disconnect from a mechanical system to verify operations before installing on the equipment.
(A motor must run smoothly at 30 r/min driven with a servo driver.)
- (39) Verify that an input power supply voltage satisfies the servo driver specifications before turning on the power and start operation.
An input voltage higher than rated may cause ignition and smoking in the servo driver, which may cause runaway or burning of a motor in some cases.
- (40) When an alarm status occurs, remove a cause of the problem before restarting.
Careless restarting without removing a cause of problem may cause malfunction or burning of a motor.
- (41) The linear motor may not be able to hold due to expiring useful life or a mechanical structure. Install a braking device on the equipment to secure safety.
- (42) Pay attention to heat radiation. The servo driver generates heat by operating a motor. A servo driver used in a sealed control box may cause an extreme rise of temperature.
Consider cooling so that an ambient temperature around the servo driver satisfies an operating range.
- (43) Maintenance and inspection is allowed only for a specializing person.
- (44) Turn off the power when the equipment is not used for a long term.

- Capacitance of the capacitors of power supply rectifier circuit drops over time. To avoid a secondary problem due to a failure, replacement of capacitors is recommended at an interval of approximately 5 years. Commission the manufacturer or sales agency authorized by the manufacturer to replace the parts.
- Be sure to read the operating manual (safety book) before use.

SAFETY PRECAUTIONS

Servo driver's ambient temperature

The driver's service life significantly depends on the ambient temperature.
Make sure that the servo driver's ambient temperature (at 5 cm distant from the servo driver) does not exceed the operating temperature range.

Operating temperature range: 0 to 55°C

Attention in the case of changing carrier frequency

- If carrier frequency is turned up, a current response may improve, and there may have an effect on temperature and noise of a motor, but the rise in temperature of the driver increases.

When you change carrier frequency, have a margin after fully confirming the temperature of the driver and the motor in the system.

Attention about installation

- Reserve enough surrounding space for effective cooling.
- Install fans to provide uniform distribution of temperature in the control panel.
- D - H frame is provided with a cooling fan at the bottom. (On the H-frame, the cooling fan is also installed on the upper side.)
- Observe the environmental conditions of the control panel described in the previous page.
- It is recommended to use the conductive paint when you make your own mounting bracket, or repaint after peeling off the paint on the machine for installing the products, in order to make noise countermeasure.

We have made the best efforts to ensure quality of this product. However, application of external noise (include radiation) or static electricity, or a defect of the input power supply, wiring or components may cause the servo driver to operate beyond the preset conditions. Therefore, you should exercise thorough caution to ensure safety against an unexpected operation.

13. Life and Warranty

13-1 Life Expectancy of the Driver

The Servo driver has 28,000 hours of life expectancy when used continuously under the following conditions.

Definition of the life Life end shall be defined as the capacitance of the electrolytic capacitor is reduced by 20% from the ex-factory status.

Condition	Input power source: 100 VAC, single phase, 50/60 Hz
	200 VAC single/three phase, 50/60 Hz,
	400 VAC single/three phase, 50/60 Hz
	Ambient temperature: 55°C
	No. of revolutions: Rated constant No. of revolutions

Note that the life varies due to the working conditions.

13-2 Typical Life

[1] In-rush current prevention relay

Replace the in-rush current prevention relay when it is activated typically 20,000 times. Note that the criteria may vary depending on the environmental and working condition.

[2] Cooling fan

Replace the cooling fan in 10,000 to 30,000 hours. Note that the criteria may vary depending on the environmental and working condition.

13-3 Warranty Period

(1) Warranty period

For a period of 12 months from the date of delivery or 18 months from the manufacturing month, whichever is shorter.

This warranty shall be exempted in the following cases,

- [1] defects resulting from misuse and/or repair or modification by the customer
- [2] defects resulting from drop of the product or damage during transportation
- [3] defects resulting from improper usage of the product beyond the specifications
- [4] defects resulting from fire, earthquake, lightning, flood, damage from salt, abnormal voltage or other act of God, or other disaster.
- [5] defects resulting from the intrusion of foreign material to the product, such as water, oil or metallic particles.

This warranty shall be exempted when the life of component exceeds its rated standard life.

(2) Warranty scope

Panasonic warrants the replacement of the defected parts of the product or repair of them when the defects of the product occur during the warranty period, and when the defects are under Panasonic responsibility. This warranty only covers the product itself and does not cover any damage incurred by such defects.

14. Others

- Precautions for export of this product and the equipment incorporating this product
If the end user or end purpose of this product relates to military affairs, armament and so on, this product may be subject to the export regulations prescribed in “Foreign Exchange and Foreign Trade Control Law”. To export this product, take thorough examination, and follow the required export procedure.
- We cannot warrant this product, if it is used beyond the specified operating conditions.
- Compliance with the relevant standards should be considered by the user.
- The final decision on the compatibility with the installations and components at the user’s site, in terms of structure, dimensions, characteristics and other conditions, should be made by the user.
- When using this product in your equipment, be careful about the compatibility with the servo motor and the servo driver to be used together.
- For performance improvement or other reasons, some components of this product may be modified in a range that satisfies the specifications given in this document.
- Any specification change shall be based on our authorized specifications or the documents presented by the user. If a specification change may affect the functions and characteristics of this product, we will produce a trial product, and conduct examination in advance.
Note that the produce price may be changed with a change in its specifications.
- We have made the best efforts to ensure the product quality. However, complete equipment at customer’s site may malfunction due to a failure of this product. Therefore, take precautions by providing fail-safe design at customer’s site, and ensure safety within the operating range of the work place.
- Failure of this product depending on its content, may generate smoke of about one cigarette.
Take this into consideration when the application of the machine is clean room related.
- When the equipment runs without connecting the servomotor’s shaft electrically to ground, electrolytic corrosion may occur on the motor bearing and the bearing noise may get louder depending on the equipment and installing environment. So, customer is responsible to check and verify it.
- A customer must verify and inspect the equipment. Please be careful when using in an environment with high concentrations of sulphur or sulphuric gases, as sulphuration can lead to disconnection from the chip resistor or a poor contact connection.
- Take care to avoid inputting a supply voltage which significantly exceeds the rated range to the power supply of this product. Failure to heed this caution may result in damage to the internal parts, causing smoking and/or a fire and other trouble.
- When discarding the equipment, process the item as an industrial waste.
- Carry out matching of a linear motor and servo driver and the checking of safety in the responsibility of your company.

【Exemption clause regarding with distribution of drive specified on this spec.】

- Product responsibility will be owned by the publisher of this specification regarding with the drive on this specification, when product had been supplied to the party which agreed to this specification
- Product responsibility will not be owned by the publisher of this specification when product had gone through the channel or end user which had not conducted the specification agreement.
- Publisher recommends that the drive is to be supplied with the motor manufacture with its motor, based on this specification being agreed with the motor manufacture.
- Specification is to be agreed with the machine manufacture, when the machine manufacture intends to procure the drive and motor separately.
- When in case the agreement of this specification becomes difficult, then we will supply the drive based on the responsibility of the distributor who has agreed to this specification.
- This specification does not assure the operation of the motor matched to the drive specified by this specification. Publisher does not confirm the matching of the motor to drive, and therefore please take extra care in confirming the matching to the motor by equipment manufacture, distributor, or motor manufacture.
- When an unexpected trouble occurs at the matching of motor, distributor, motor manufacture, and machine manufacture is to correspond the trouble in good faith. in good faith

Specification for Each Model

- MINAS-A5NL Series
- Size A 100 V and 200 V

Model	MADHT1105NL1	MADHT1107NL1	MADHT1505NL1	MADHT1507NL1
Power supply input	Single phase 100 V	Single phase 100 V	Single phase/ 3 phase 200 V	Single phase/ 3 phase 200 V

	24	Not used	-		20	For manufacturer's use	0	7	0	LED display	0		31	RTEX monitor selection 3	0
	25	Positive direction thrust limit	500		21	For manufacturer's use	0		1	Address indicated time at power-up	0		32	RTEX monitor selection 4	0
	26	Negative direction thrust limit	500		22	A/B-phase feedback scale pulse output selection	0		2	Not used	-		33	RTEX monitor selection 5	0
	27	Not used	-		23	Disturbance thrust compensating gain	0		3	Thrust limited output setup	0		34	RTEX monitor selection 6	0
	28	Not used	-		24	Disturbance observer filter	0.53		4	For manufacturer's use	0		35	RTEX command setup 1	0
	29	For manufacturer's use	2		25	Not used	-		5	For manufacturer's use	0		36	RTEX command setup 2	0
	30	Not used	-		26	Not used	-		6	For manufacturer's use	0		37	RTEX command setup 3	0
	31	USB axis address	1		27	Warning latch setup	0		7	For manufacturer's use	0		38	RTEX update counter warning protection setup	0
	32	Not used	-		28	Not used	-		8	For manufacturer's use	0		39	For manufacturer's use	0
	33	Pulse regenerative output limit setup	0		29	Not used	-		9	For manufacturer's use	360		40	RTEX function expansion 4	1
	34	For manufacturer's use	4		30	Not used	-		10	Software-limit function	0		41	RTEX function expansion 5	0
6	0	Not used	-	31	Real-time auto tuning estimation speed	1	11		Positive software-limit value	500000	42	Not used	-		
	1	Not used	-	32	Real-time auto tuning custom setup	0	12		Negative software-limit value	-500000	43	output setup for completion of estimating magnetic poles position	0		
	2	Velocity deviation excess setup	0	33	Not used	-	13		home offset for absolute encoder	0	44	Not used	-		
	3	Not used	-	34	Not used	-	14		Detection time of main power off warning	0	45	Not used	-		
	4	Not used	-	35	Not used	-	15		NEAR range	10	46	Not used	-		
	5	Position 3rd gain valid time	0.0	36	Not used	-	16		Not used	-	47	Not used	-		
	6	Position 3rd gain scaling factor	100	37	Oscillation detecting level	0.0	17		Not used	-	48	Not used	-		
	7	thrust command additional value	0	38	Warning mask setup	4	18	Not used	-	49	Not used	-			

[Default value of the parameters(3/3)]

No. SX-DSV02308

PARAMETER

MODEL	MINAS-A5NL and A5N9 series all common
-------	---------------------------------------

[illegible]
